MATERIALS
For this paper you must have:
• a ruler
• a calculator.

INSTRUCTIONS
• Answer all questions in the spaces provided.
• Do all rough work in this book. Cross through any work you do not want to be marked.

INFORMATION
• There are 100 marks available on this paper.
• The marks for questions are shown in brackets.
• You are expected to use a calculator where appropriate.
• You are reminded of the need for good English and clear presentation in your answers.
• When answering questions 02.4, 03.2, and 10 you need to make sure that your answer:
  – is clear, logical, sensibly structured
  – fully meets the requirements of the question
  – shows that each separate point or step supports the overall answer.

ADVICE
In all calculations, show clearly how you work out your answer.

Please write clearly, in block capitals.

There are no questions printed on this page
Plants transport water and mineral ions from the roots to the leaves.

Plants move mineral ions:
- from a low concentration in the soil
- to a high concentration in the root cells.

What process do plants use to move these minerals ions into root cells? [1 mark]

Tick one box.

- Active transport
- Diffusion
- Evaporation
- Osmosis

Describe how water moves from roots to the leaves. [2 marks]

Question 1 continues on the next page
Plants lose water through the stomata in the leaves.

The epidermis can be peeled from a leaf.

The stomata can be seen using a light microscope.

Table 1 shows the data a student collected from five areas on one leaf.

<table>
<thead>
<tr>
<th>Leaf area</th>
<th>Number of stomata</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Upper surface</td>
<td>Lower surface</td>
</tr>
<tr>
<td>1</td>
<td>3</td>
<td>44</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
<td>41</td>
</tr>
<tr>
<td>3</td>
<td>1</td>
<td>40</td>
</tr>
<tr>
<td>4</td>
<td>5</td>
<td>42</td>
</tr>
<tr>
<td>5</td>
<td>1</td>
<td>39</td>
</tr>
<tr>
<td>Mean</td>
<td>2</td>
<td>X</td>
</tr>
</tbody>
</table>

Describe how the student might have collected the data in Table 1.

[3 marks]
01.4 What is the median number of stomata on the upper surface of the leaf? [1 mark]

01.5 Calculate the value of $X$ in Table 1.

Give your answer to 2 significant figures. [2 marks]

Mean number of stomata on lower surface of leaf = ______________________

01.6 The plant used in this investigation has very few stomata on the upper surface of the leaf.

Explain why this is an advantage to the plant. [2 marks]

Turn over for the next question
Tobacco mosaic virus (TMV) is a disease affecting plants. Figure 1 shows a leaf infected with TMV.

Figure 1

Yellow patches where TMV has destroyed chloroplasts

All tools should be washed in disinfectant after using them on plants infected with TMV. Suggest why.

[1 mark]

Scientists produced a single plant that contained a TMV-resistant gene. Suggest how scientists can use this plant to produce many plants with the TMV-resistant gene.

[1 mark]
Some plants produce fruits which contain glucose.

Describe how you would test for the presence of glucose in fruit.  

[2 marks]

TMV can cause plants to produce less chlorophyll.

This causes leaf discoloration.

Explain why plants with TMV have stunted growth.  

[4 marks]

Turn over for the next question
Microorganisms cause infections.

The human body has many ways of defending itself against microorganisms.

Describe two ways the body prevents the entry of microorganisms. [2 marks]

1

2
In 2014 the Ebola virus killed almost 8 000 people in Africa.

Drug companies have developed a new drug to treat Ebola.

Explain what testing must be done before this new drug can be used to treat people. [6 marks]
There are no questions printed on this page
All living cells respire.

Respiration transfers energy from glucose for muscle contraction.

Describe how glucose from the small intestine is moved to a muscle cell. [2 marks]

Question 4 continues on the next page
Figure 2 shows an experiment to investigate anaerobic respiration in yeast cells.

What is the purpose of the liquid paraffin in Tube A? Tick one box.

- To prevent evaporation
- To stop air getting in
- To stop the temperature going up
- To stop water getting in

[1 mark]
The indicator solution in Tube B shows changes in the concentration of carbon dioxide (CO₂).

The indicator is:

- **blue** when the concentration of CO₂ is very low
- **green** when the concentration of CO₂ is low
- **yellow** when the concentration of CO₂ is high.

What colour would you expect the indicator to be in Tube B during maximum rate of anaerobic respiration? [1 mark]

Tick one box.

- Blue
- Green
- Yellow

Suggest how the experiment could be changed to give a reproducible way to measure the rate of the reaction. Include any apparatus you would use. [2 marks]

Question 4 continues on the next page
Compare anaerobic respiration in a yeast cell with anaerobic respiration in a muscle cell.

[3 marks]
A student investigated the effect of different sugar solutions on potato tissue.

This is the method used.
1. Add 30 cm$^3$ of 0.8 mol dm$^{-3}$ sugar solution to a boiling tube.
2. Repeat step 1 with equal volumes of 0.6, 0.4 and 0.2 mol dm$^{-3}$ sugar solutions.
3. Use water to give a concentration of 0.0 mol dm$^{-3}$.
4. Cut five cylinders of potato of equal size using a cork borer.
5. Weigh each potato cylinder and place one in each tube.
6. Remove the potato cylinders from the solutions after 24 hours.
7. Dry each potato cylinder with a paper towel.
8. Reweigh the potato cylinders.

Table 2 shows the results.

<table>
<thead>
<tr>
<th>Concentration of sugar solution in mol dm$^{-3}$</th>
<th>Starting mass in g</th>
<th>Final mass in g</th>
<th>Change of mass in g</th>
<th>Percentage (%) change</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.0</td>
<td>1.30</td>
<td>1.51</td>
<td>0.21</td>
<td>16.2</td>
</tr>
<tr>

<tr>
<td>0.6</td>
<td>1.34</td>
<td>1.28</td>
<td>−0.06</td>
<td>−4.5</td>
</tr>
<tr>
<td>0.8</td>
<td>1.22</td>
<td>1.11</td>
<td>−0.11</td>
<td>−9.0</td>
</tr>
</tbody>
</table>

Calculate the value of X in Table 2.

[2 marks]

Percentage change in mass = _____________________ %
05.2 Why did the student calculate the percentage change in mass as well as the change in grams? [1 mark]

05.3 Complete Figure 3 using data from Table 2.
- Choose a suitable scale and label for the x-axis.
- Plot the percentage (%) change in mass.
- Draw a line of best fit. [4 marks]

Figure 3

Question 5 continues on the next page
Use your graph in Figure 3 to estimate the concentration of the solution inside the potato cells. 

Concentration = \[ \text{mol dm}^{-3} \] 

The results in Table 2 show the percentage change in mass of the potato cylinders.

Explain why the percentage change results are positive and negative.

Suggest two possible sources of error in the method given on page 16.
Figure 4 shows the human digestive system.

Figure 4

Label the stomach and pancreas on Figure 4. [1 mark]

Question 6 continues on the next page
Many people suffer from stomach ulcers caused by a species of bacteria called *Helicobacter pylori*.

The stomach is lined with a protective lining of mucus.

*Helicobacter pylori* are acid-tolerant bacteria which can damage this mucus lining.

Suggest how an infection with *Helicobacter pylori* might result in a stomach ulcer developing.  

[2 marks]

*Helicobacter pylori* can also cause stomach cancer.

Describe how a person infected with *Helicobacter pylori* could also develop liver cancer.  

[3 marks]
Gluten is a form of protein found in some grains.

Describe the test you would use to find out if protein is present in food. [2 marks]

Coeliac disease is a disease of the digestive system.

It damages the lining of the small intestine when foods that contain gluten are eaten.

When people with coeliac disease eat foods that contain gluten:
1. their immune system forms antibodies to gluten
2. these antibodies attack the lining of the small intestine
3. this causes inflammation in the intestines and damages the villi.

Symptoms of coeliac disease include poor growth.

Suggest why a person with coeliac disease might have this symptom. [4 marks]
A gardener is looking at the plants in his greenhouse.

Some of the plants have a disease.

Give two ways the gardener could identify the pathogen infecting the plants.

1. 

2. 

Plants can become unhealthy if they do not have essential mineral ions.

Describe the appearance of plants with:

- nitrate deficiency
- magnesium deficiency.

Nitrate deficiency

Magnesium deficiency
Plants need other mineral ions.

- Potassium ions are needed for healthy root growth.
- Phosphate ions are needed for healthy flowers and fruits.

The gardener makes his own garden compost.

The percentage (%) of minerals in his compost was compared with two fertilisers he could buy.

The data are shown in Table 3.

**Table 3**

<table>
<thead>
<tr>
<th>Percentage (%) mineral content</th>
<th>Nitrate ions</th>
<th>Phosphate ions</th>
<th>Potassium ions</th>
<th>Cost in £/kg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Garden compost</td>
<td>0.5</td>
<td>0.3</td>
<td>0.8</td>
<td>0.00</td>
</tr>
<tr>
<td>Fertiliser S</td>
<td>5.0</td>
<td>1.3</td>
<td>6.6</td>
<td>4.99</td>
</tr>
<tr>
<td>Fertiliser T</td>
<td>3.0</td>
<td>12.0</td>
<td>6.0</td>
<td>9.99</td>
</tr>
</tbody>
</table>

The gardener buys Fertiliser **S**.

Explain why he chose Fertiliser **S**.

[4 marks]
Lungworm is an infection.
Lungworm can kill dogs.
It is caused by a small worm.

Figure 5 shows the lifecycle of the lungworm.

**Figure 5**

1. Lungworm reproduces in the dog and infects the lungs. The larvae (young stages of the worm) are coughed up from the lungs and swallowed.
2. Worm larvae pass out in faeces and are picked up by snails.
3. Dogs touch or eat snails.

What type of organism is represented by the snail in the lifecycle of the lungworm? [1 mark]

Tick one box.

- Fungus
- Parasite
- Protist
- Vector
08. 2 Suggest how the spread of the lungworm disease can be prevented. [3 marks]

08. 3 Malaria is a disease spread by mosquitoes. Describe **two** ways to control the spread of malaria. [2 marks]

1. 

2. 

---

**Turn over for the next question**
Figure 6 shows photographs of some animal cells at different stages during the cell cycle.

**Figure 6**
Which photograph in Figure 6 shows a cell that is not going through mitosis? [1 mark]

Tick one box.

A  B  C

Describe what is happening in photograph A. [2 marks]

Question 9 continues on the next page
A student wanted to find out more about the cell cycle.

The student made a slide of an onion root tip.

She counted the number of cells in each stage of the cell cycle in one field of view. **Table 4** shows the results.

<table>
<thead>
<tr>
<th>Stages in the cell cycle</th>
<th>Non-dividing cells</th>
<th>Stage 1</th>
<th>Stage 2</th>
<th>Stage 3</th>
<th>Stage 4</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of cells</td>
<td>20</td>
<td>9</td>
<td>4</td>
<td>2</td>
<td>1</td>
<td>36</td>
</tr>
</tbody>
</table>

Each stage of the cell cycle takes a different amount of time.

Which stage in **Table 4** is the fastest in the cell cycle?

Give a reason for your answer. [2 marks]

Stage ____________

Reason ____________________________________

_________________________________________
The cell cycle in an onion root tip cell takes 16 hours.

Calculate the length of time **Stage 2** lasts in a typical cell.

Give your answer to 2 significant figures.  

\[
\text{Time in Stage 2} = \text{__________ minutes}
\]

**Question 9 continues on the next page**
Bacteria such as *Escherichia coli* undergo cell division similar to mitosis.

**Figure 7** shows a growth curve for *E. coli* grown in a nutrient broth.

What type of cell division causes the change in number of *E. coli* cells at P?

[1 mark]
Suggest why the number of cells levels out at Q. [2 marks]

Turn over for the next question
Explain how the human circulatory system is adapted to:

- supply oxygen to the tissues
- remove waste products from tissues.

[6 marks]
Monoclonal antibodies are used to measure the levels of hormones in the blood.

Pregnant women produce the hormone HCG.

HCG is excreted in urine.

**Figure 8** shows four pregnancy test strips.

![Pregnancy Test Strips](image)

**Figure 8**

**Positive test result**
A line appears in the control window and the result window.

**Negative test result**
A line appears only in the control window.

**Invalid test result**
No line appears in the control window.

1. Which test strip shows a negative test result? [1 mark]

Tick one box.

A  B  C  D

1. Which test strip shows a negative test result? [1 mark]

1. Monoclonal antibodies are used for pregnancy testing.

Give one other use of monoclonal antibodies. [1 mark]
Figure 9 shows the parts of a pregnancy test strip.

1. Urine applied here.

2. Reaction zone:
   - There are mobile antibodies specific to HCG here. These antibodies can move and have blue dye attached to them.

3. Result window:
   - Immobilised antibodies specific to HCG here.

4. Control window:
   - Immobilised antibodies specific to the mobile antibodies from the reaction zone.

The pregnancy test strip will show a positive test result when a woman is pregnant.

Explain how the pregnancy test strip works to show a positive result. [6 marks]

END OF QUESTIONS
