Materials
For this paper you must have:
• a ruler
• a calculator
• the periodic table (enclosed).

Instructions
• Answer all questions in the spaces provided.
• Do all rough work in this book. Cross through any work you do not want to be marked.

Information
• There are 100 marks available on this paper.
• The marks for questions are shown in brackets.
• You are expected to use a calculator where appropriate.
• You are reminded of the need for good English and clear presentation in your answers.
• When answering questions 11.3 and 12.2 you need to make sure that your answer:
  - is clear, logical, sensibly structured
  - fully meets the requirements of the question
  - shows that each separate point or step supports the overall answer.

Advice
In all calculations, show clearly how you work out your answer.

Please write clearly, in block capitals.

Centre number           Candidate number           
Surname                 
Forename(s)             
Candidate signature
This question is about mixtures and analysis.

Which two substances are mixtures? [2 marks]

Tick two boxes.

<table>
<thead>
<tr>
<th>Substance</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Air</td>
<td></td>
</tr>
<tr>
<td>Carbon dioxide</td>
<td></td>
</tr>
<tr>
<td>Graphite</td>
<td></td>
</tr>
<tr>
<td>Sodium Chloride</td>
<td></td>
</tr>
<tr>
<td>Steel</td>
<td></td>
</tr>
</tbody>
</table>

01.2 Draw one line from each context to the correct meaning. [2 marks]

<table>
<thead>
<tr>
<th>Context</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pure substance in chemistry</td>
<td>A single element or a single compound</td>
</tr>
<tr>
<td>Pure substance in everyday life</td>
<td>A substance containing only atoms which have different numbers of protons</td>
</tr>
<tr>
<td></td>
<td>A substance that can be separated by filtration</td>
</tr>
<tr>
<td></td>
<td>A useful product made by mixing substances</td>
</tr>
</tbody>
</table>
What is the test for chlorine gas? [1 mark]

Tick one box.

- A glowing splint relights
- A lighted splint gives a pop
- Damp litmus paper turns white
- Limewater turns milky

A student tested a metal chloride solution with sodium hydroxide solution.

A brown precipitate formed.

What was the metal ion in the metal chloride solution? [1 mark]

Tick one box.

- Calcium
- Copper(II)
- Iron(II)
- Iron(III)
0 2

The word equation shows the reaction between anhydrous cobalt chloride and water.

\[
\text{anhydrous cobalt chloride (blue)} + \text{water} \rightarrow \text{hydrated cobalt chloride (pink)}
\]

0 2 . 1 Name the type of reaction shown by the sign \( \rightarrow \)

[1 mark]

0 2 . 2 When the student added water to anhydrous cobalt chloride what happened?

[1 mark]
A student measured the temperature rise when anhydrous cobalt chloride was added to water.

The student’s results are shown in Table 1.

<table>
<thead>
<tr>
<th>Trial 1</th>
<th>Trial 2</th>
<th>Trial 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temperature rise in °C</td>
<td>8.5</td>
<td>8.2</td>
</tr>
</tbody>
</table>

Calculate the mean temperature rise.

\[
\text{Temperature} = \frac{8.5 + 8.2 + 8.2}{3} \text{ °C}
\]

When water was added to anhydrous cobalt chloride an exothermic reaction took place.

Name the type of reaction when hydrated cobalt chloride reacts to form anhydrous cobalt chloride and water.

Turn over for the next question
Gold is mixed with other metals to make jewellery.

Figure 2 shows the composition of different carat values of gold.

**Figure 2**

![Bar chart showing the composition of gold in 9 carat and 18 carat gold.](chart_image)

**Key**
- Cu
- Ag
- Au

What is the percentage of gold in 12 carat gold?

Tick one box.

- 12 %
- 30 %
- 50 %
- 80 %
03.2 Give the percentage of silver in 18 carat gold. [1 mark]

Use Figure 2 to answer this question.

Percentage = ____________________________ %

03.3 Suggest two reasons why 9 carat gold is often used instead of pure gold to make jewellery. [2 marks]

1. ____________________________

2. ____________________________

Turn over for the next question
Turn over for the next question
A student investigated a food colouring using paper chromatography.

This is the method used.

1. Put a spot of food colouring X on the start line.
2. Put spots of three separate dyes, A, B and C, on the start line.
3. Place the bottom of the paper in water and leave it for several minutes.

Figure 3 shows the apparatus the student used.

![Figure 3](image)

Give two mistakes the student made in setting up the experiment.

[2 marks]

Tick two boxes.

The lid was on the beaker.
The paper did not touch the bottom of the beaker.
The spots were too small.
The start line was drawn in ink.
The water level was above the spots.
Another student set the experiment up correctly.

**Figure 4** shows the student’s results.

**Figure 4**

How many dyes were in $X$?

Tick one box.

0 3 4 6

[1 mark]
Which dye, A, B or C, is not in X? [1 mark]

Write your answer in the box.

Use Figure 4 to complete Table 1.

Calculate the value for Rf for dye A. [5 marks]

Table 1

<table>
<thead>
<tr>
<th>Distance in mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance moved by dye A</td>
</tr>
<tr>
<td>Distance from start line to solvent front</td>
</tr>
</tbody>
</table>

Use the equation:

\[ R_f = \frac{\text{distance moved by dye } A}{\text{distance moved by solvent}} \]

Give your answer to two significant figures.

\[ R_f \text{ value} = \]
Greenhouse gases affect the temperature of the Earth.

Which gas is a greenhouse gas?

Tick one box.

Argon
Methane
Nitrogen
Oxygen

An increase in global temperature will cause climate change.

What is one possible effect of climate change?

Tick one box.

Deforestation
Global dimming
Sea levels rising
Volcanic activity
Carbon dioxide is also a greenhouse gas.

**Figure 5** shows how the concentration of carbon dioxide in the atmosphere has changed since 1850.

<table>
<thead>
<tr>
<th>Year</th>
<th>Carbon dioxide concentration in parts per million</th>
</tr>
</thead>
<tbody>
<tr>
<td>1850</td>
<td>0</td>
</tr>
<tr>
<td>1900</td>
<td>200</td>
</tr>
<tr>
<td>1950</td>
<td>300</td>
</tr>
<tr>
<td>2000</td>
<td>400</td>
</tr>
</tbody>
</table>

Which process is the reason for the change in carbon dioxide concentration shown on **Figure 5**?

[1 mark]

Tick one box.

- Burning of fossil fuels
- Carbon capture
- Formation of sedimentary rocks
- Photosynthesis

**Question 5 continues on the next page**
Give three conclusions that can be made from Figure 5.

[3 marks]

1

2

3
Table 2 gives information about four alcohols.

Table 2

<table>
<thead>
<tr>
<th>Alcohol</th>
<th>Formula</th>
<th>Melting point in °C</th>
<th>Boiling point in °C</th>
</tr>
</thead>
<tbody>
<tr>
<td>Methanol</td>
<td>CH₃OH</td>
<td>-94</td>
<td>65</td>
</tr>
<tr>
<td>Ethanol</td>
<td>CH₃CH₂OH</td>
<td>-118</td>
<td>78</td>
</tr>
<tr>
<td>Propanol</td>
<td>CH₃CH₂CH₂OH</td>
<td>-129</td>
<td>97</td>
</tr>
<tr>
<td>Butanol</td>
<td>CH₃CH₂CH₂CH₂OH</td>
<td>-89</td>
<td>118</td>
</tr>
</tbody>
</table>

06 Which alcohol in Table 2 is liquid over the greatest temperature range? [1 mark]

06 . 1 Which statement is correct? [1 mark]

Tick one box.

- A molecule of ethanol has 5 hydrogen atoms
- Butanol has the highest boiling point
- Methanol has the largest molecules
- Propanol has the highest melting point

Question 6 continues on the next page
A molecule of methanol has five single covalent bonds.

Draw the missing bonds in Figure 6 to complete the displayed formula for methanol.

[1 mark]

Figure 6

\[
\begin{array}{c}
\text{H} \\
\text{H} \\
\text{C} \\
\text{O} \\
\text{H} \\
\text{H}
\end{array}
\]

Figure 7 shows a flow diagram of the process to produce ethanol.

Figure 7

Ethene + steam \rightarrow \text{Reactor}

\text{Gases are cooled}

\text{Mixture of ethanol and water}

Complete the word equation for the reaction to produce ethanol.

[1 mark]

\[
\underline{\text{Ethene}} + \underline{\text{steam}} \rightarrow \text{ethanol}
\]
06.5 What happens to the unreacted ethene? [1 mark]

06.6 Wine contains ethanol. A bottle of wine was left open in air. After a few days, the wine tasted of vinegar. Vinegar is a solution of ethanoic acid in water. Explain how oxidation causes the wine to taste of vinegar after a few days. [3 marks]

Turn over for the next question
Nitrogen and hydrogen are passed over iron to produce ammonia in the Haber Process.

Balance the equation for the reaction. [1 mark]

\[ \text{N}_2 + \text{H}_2 \rightarrow \text{NH}_3 \]

What is iron used for in the Haber process? [1 mark]

Tick one box.

- catalyst
- fuel
- monomer
- reactant
Figure 8 shows how the percentage yield of ammonia changes with pressure.

Figure 8

Describe the trend shown in Figure 8.

[1 mark]

Use Figure 8 to determine the difference in percentage yield of ammonia at 150 atmospheres pressure and 250 atmospheres pressure.

[2 marks]

Difference in percentage yield of ammonia = 

Turn over for the next question
This question is about hydrocarbons.

The names and formulae of three hydrocarbons in the same homologous series are:

- Ethane $\text{C}_2\text{H}_6$
- Propane $\text{C}_3\text{H}_8$
- Butane $\text{C}_4\text{H}_{10}$

The next member in the series is pentane.

What is the formula of pentane? [1 mark]

Which homologous series contains ethane, propane and butane? [1 mark]

Tick one box.

- Alcohols
- Alkanes
- Alkenes
- Carboxylic acids

Propane ($\text{C}_3\text{H}_8$) is used as a fuel.

Complete the equation for the complete combustion of propane. [2 marks]

$$\text{C}_3\text{H}_8 + 5\text{O}_2 \rightarrow 3 \text{__________} + 4 \text{__________}$$
Octane (C₈H₁₈) is a hydrocarbon found in petrol.

Explain why octane is a hydrocarbon.

[2 marks]

Table 3 gives information about the pollutants produced by cars using diesel or petrol as a fuel.

Table 3

<table>
<thead>
<tr>
<th>Fuel</th>
<th>Relative amounts of pollutants</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Oxides of Nitrogen</td>
</tr>
<tr>
<td>Diesel</td>
<td>31</td>
</tr>
<tr>
<td>Petrol</td>
<td>23</td>
</tr>
</tbody>
</table>

Compare the pollutants from cars using diesel with those from cars using petrol.

[3 marks]
Pollutants cause environmental impacts.

Draw **one** line from each pollutant to the environmental impact caused by the pollutant.

<table>
<thead>
<tr>
<th>Pollutant</th>
<th>Environmental impact caused by the pollutant</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oxides of nitrogen</td>
<td>Acid rain</td>
</tr>
<tr>
<td></td>
<td>Flooding</td>
</tr>
<tr>
<td></td>
<td>Global dimming</td>
</tr>
<tr>
<td>Particulate matter</td>
<td>Global warming</td>
</tr>
<tr>
<td></td>
<td>Photosynthesis</td>
</tr>
</tbody>
</table>
A student investigated the rate of reaction between marble chips and hydrochloric acid.

Figure 9 shows the apparatus the student used.

Figure 9

What is A?

Tick one box.

- cotton wool
- limestone
- poly(ethene)
- rubber bung

[1 mark]

Question 9 continues on the next page
Table 4 shows the student’s results for one investigation.

<table>
<thead>
<tr>
<th>Time in s</th>
<th>Mass lost in g</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0.0</td>
</tr>
<tr>
<td>20</td>
<td>1.6</td>
</tr>
<tr>
<td>40</td>
<td>2.6</td>
</tr>
<tr>
<td>60</td>
<td>2.9</td>
</tr>
<tr>
<td>80</td>
<td>3.7</td>
</tr>
<tr>
<td>100</td>
<td>4.0</td>
</tr>
<tr>
<td>120</td>
<td>4.0</td>
</tr>
</tbody>
</table>

On Figure 10:
- Plot these results on the grid.
- Draw a line of best fit.

Figure 10
Use Figure 10 to complete Table 5.

[2 marks]

Table 5

<table>
<thead>
<tr>
<th>Mass lost after 0.5 minutes</th>
<th>......................... g</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time taken to complete the reaction</td>
<td>......................... s</td>
</tr>
</tbody>
</table>

The equation for the reaction is:

\[ 2\text{HCl}(aq) + \text{CaCO}_3(s) \rightarrow \text{CaCl}_2(aq) + \text{H}_2\text{O}(l) + \text{CO}_2(g) \]

Explain why there is a loss in mass in this investigation.

[2 marks]

Question 9 continues on the next page
Another student investigated the rate of a different reaction.

Table 6 shows the results from the different reaction.

Table 6

<table>
<thead>
<tr>
<th>Mass lost when the reaction was complete</th>
<th>9.85 g</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time taken to complete the reaction</td>
<td>2 minutes 30 seconds</td>
</tr>
</tbody>
</table>

Calculate the mean rate of the reaction using Table 6 and the equation: \[
\text{mean rate of reaction} = \frac{\text{mass lost in g}}{\text{time taken in s}}
\]

Give your answer to two decimal places.

\[
\text{Mean rate of reaction} = \quad \text{g/s}
\]

The student measured the change in mass of the reactants.

Describe another method, other than measuring the change in mass of the reactions, that the student could have used to find the rate of the reaction between marble chips and hydrochloric acid.

\[
\text{[2 marks]}
\]
Another student planned to investigate the effect of temperature on the rate of reaction. The student predicted that the rate of reaction would increase as the temperature was increased.

Give two reasons why the student’s prediction is correct. [2 marks]

Tick two boxes.

- The particles are more concentrated.  
- The particles have a greater mass.  
- The particles have a larger surface area.  
- The particles have more energy.  
- The particles move faster.

Turn over for the next question
Water from a lake in the UK is used to produce drinking water.

What are the two main steps used to treat water from lakes?

Give a reason for each step. [2 marks]

Step 1
Reason
Step 2
Reason

Explain why it is more difficult to produce drinking water from waste water than from water in lakes. [3 marks]
Some countries make drinking water from sea water.

Complete Figure 11 to show how you can distil salt solution to produce and collect pure water.

Label the following:
- pure water
- salt solution

[3 marks]
10.4 How could the water be tested to show it is pure?

Give the expected result of the test for pure water. [2 marks]

10.5 Why is producing drinking water from sea water expensive? [1 mark]
Figure 12 shows six test tubes a student set up to investigate the rusting of iron.

This is the method used for each test tube.

1. Measure the mass of the nail using a balance.
2. Leave the nail in the test tube for 6 days.
3. Measure the mass of the nail after 6 days.

Figure 12

Test tube 1

Test tube 2

Test tube 3

Test tube 4

Test tube 5

Test tube 6

Question 11 continues on the next page
Table 7 shows the student’s measurements.

### Table 7

<table>
<thead>
<tr>
<th>Test tube</th>
<th>Mass of nail in g</th>
<th>Mass of nail after 6 days in g</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>8.45</td>
<td>8.91</td>
</tr>
<tr>
<td>2</td>
<td>8.46</td>
<td>8.46</td>
</tr>
<tr>
<td>3</td>
<td>8.51</td>
<td>8.51</td>
</tr>
<tr>
<td>4</td>
<td>9.65</td>
<td>9.65</td>
</tr>
<tr>
<td>5</td>
<td>9.37</td>
<td>9.45</td>
</tr>
<tr>
<td>6</td>
<td>9.79</td>
<td>9.79</td>
</tr>
</tbody>
</table>

What is the resolution of the balance the student used? [1 mark]

Tick one box.

- $1 \times 10^{-3} \text{ g}$
- $1 \times 10^{-2} \text{ g}$
- $1 \times 10^{-1} \text{ g}$
- $1 \times 10^{2} \text{ g}$
Calculate the difference in percentage increase in mass after 6 days of the nail in test tube 1 and the nail in test tube 5.

Give your answer to three significant figures. [4 marks]

Difference in percentage increase in mass = ________________ %

Question 11 continues on the next page
11.3 Use the results of the student’s investigations to draw conclusions about the factors affecting the rusting of iron. Include an evaluation of the effectiveness of different coatings at preventing the rusting of iron.

[6 marks]

11.4 Rust is hydrated iron(III) oxide.

Complete the word equation for the reaction.

[2 marks]

_________ + ___________ + ___________ → hydrated iron(III) oxide
Plastic and glass can be used to make milk bottles.

**Figure 13** shows the percentage of milk bottles made from glass between 1975 and 2010.

![Graph showing percentage of milk bottles made from glass between 1975 and 2010.](image)

12.1 Plot the points and draw a line on **Figure 13** to show the percentage of milk bottles made from materials **other** than glass between 1975 and 2010.

[3 marks]
Table 8 gives information about milk bottles.

<table>
<thead>
<tr>
<th></th>
<th>Glass milk bottle</th>
<th>Plastic milk bottle</th>
</tr>
</thead>
<tbody>
<tr>
<td>Raw materials</td>
<td>Sand, limestone, salt</td>
<td>Crude oil</td>
</tr>
<tr>
<td>Bottle material</td>
<td>Soda-lime glass</td>
<td>HD poly(ethene)</td>
</tr>
<tr>
<td>Initial stage in production of bottle material</td>
<td>Limestone and salt used to produce sodium carbonate.</td>
<td>Production of naphtha fraction.</td>
</tr>
<tr>
<td>Maximum temperature in production process</td>
<td>1600 °C</td>
<td>850 °C</td>
</tr>
<tr>
<td>Number of times bottle can be used for milk</td>
<td>25</td>
<td>1</td>
</tr>
<tr>
<td>Size(s) of bottle</td>
<td>0.5 dm³</td>
<td>0.5 dm³, 1 dm³, 2 dm³, 3 dm³</td>
</tr>
<tr>
<td>Percentage (%) of recycled material used in new bottles</td>
<td>50 %</td>
<td>10 %</td>
</tr>
</tbody>
</table>

Evaluate the production and use of bottles made from soda-lime glass and those made from HD poly(ethene).

Use the information given and your knowledge and understanding to justify your choice of material for milk bottles.

[6 marks]
END OF QUESTIONS
