## Paper 1

---

Exam Date

Morning

Time allowed: 1 hour 30 minutes

### Materials

For this paper you must have:

- The AQA booklet of formulae and statistical tables.
- You may use a graphics calculator.

### Instructions

- Use black ink or black ball-point pen. Pencil should be used for drawing.
- Answer **all** questions.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do **not** use the space provided for a different question.
- Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

### Advice

Unless stated otherwise, you may quote formulae, without proof, from the booklet. You do not necessarily need to use all the space provided.

---

---

---

Answer **all** questions in the spaces provided.

---

- 1 A reflection is represented by the matrix  $\begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}$

State the equation of the line of invariant points.

Circle your answer.

[1 mark]

$x = 0$

$y = 0$

$y = x$

$y = -x$

- 2 Find the mean value of  $3x^2$  over the interval  $1 \leq x \leq 3$

Circle your answer.

[1 mark]

$8\frac{2}{3}$

10

13

26

- 3 Find the equations of the asymptotes of the curve  $x^2 - 3y^2 = 1$

Circle your answer.

[1 mark]

$$y = \pm 3x$$

$$y = \pm \frac{1}{3}x$$

$$y = \pm \sqrt{3}x$$

$$y = \pm \frac{1}{\sqrt{3}}x$$

Turn over for the next question

---

**6 (a)** Use the definitions of  $\sinh x$  and  $\cosh x$  in terms of  $e^x$  and  $e^{-x}$  to show that

$$x = \frac{1}{2} \ln \left( \frac{1+t}{1-t} \right) \text{ where } t = \tanh x$$

**[4 marks]**

---

---

---

---

---

---

---

---

---

**Question 6 continues on the next page**

**6 (b) (ii)** Show that the equation  $\cosh 3x = 13 \cosh x$  has only one positive solution.

Find this solution in exact logarithmic form.

**Turn over for the next question**

- 7 A lighting engineer is setting up part of a display inside a large building. The diagram shows a plan view of the area in which he is working.

He has two lights, which project narrow beams of light.

One is set up at a point 3 metres above the point  $A$  and the beam from this light hits the wall 23 metres above the point  $D$ .

The other is set up 1 metre above the point  $B$  and the beam from this light hits the wall 29 metres above the point  $C$ .

- 7 (a) By creating a suitable model, show that the beams of light intersect.

[6 marks]

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**7 (b)** Find the angle between the two beams of light.

**[3 marks]**

---

---

---

---

---

---

---

---

---

---

---

---

**7 (c)** State one way in which the model you created in part **(a)** could be refined.

**[1 mark]**

---

---

---

---

**8** A curve has polar equation  $r = 3 + 2 \cos \theta$ , where  $0 \leq \theta < 2\pi$

**8 (a) (i)** State the maximum and minimum values of  $r$ .

**[2 marks]**

---

---

---

---

---

---

---

**8 (a) (ii)** Sketch the curve.

**[2 marks]**

$O$  —————→ Initial line

- 9 (a) Sketch on the Argand diagram below, the locus of points satisfying the equation  $|z - 2| = 2$

[2 marks]

- 
- 9 (b)** Given that  $|z - 2| = 2$  and  $\arg(z - 2) = -\frac{\pi}{3}$ , express  $z$  in the form  $a + bi$ , where  $a$  and  $b$  are real numbers.

**[3 marks]**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**Turn over for the next question**

- 
- 10 (b)** Alex substituted a few values of  $n$  into the expression  $(n + 1)(n + 2)(n + 3)$  and made the statement:

“For all positive integers  $n$ ,

$$6 + 3 \sum_{r=1}^n (r + 1)(r + 2)$$

is divisible by 12.”

Disprove Alex’s statement.

**[2 marks]**

---

---

---

---

---

---

---

**Turn over for the next question**

- 11** The equation  $x^3 - 8x^2 + cx + d = 0$  where  $c$  and  $d$  are real numbers, has roots  $\alpha, \beta, \gamma$ .
- When plotted on an Argand diagram, the triangle with vertices at  $\alpha, \beta, \gamma$  has an area of 8.
- Given  $\alpha = 2$ , find the values of  $c$  and  $d$ .
- Fully justify your solution.

**[5 marks]**

---

---

---

---

---

---

---

---

---

---

---

---

**12** A curve,  $C_1$  has equation  $y = f(x)$ , where  $f(x) = \frac{5x^2 - 12x + 12}{x^2 + 4x - 4}$

The line  $y = k$  intersects the curve,  $C_1$

**12 (a) (i)** Show that  $(k + 3)(k - 1) \geq 0$

**[5 marks]**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**Question 12 continues on the next page**

- 
- 12 (b)** Show that the curve  $C_2$  whose equation is  $y = \frac{1}{f(x)}$ , has no vertical asymptotes.

**[2 marks]**

---

---

---

---

---

---

---

- 12 (c)** State the equation of the line that is a tangent to both  $C_1$  and  $C_2$ .

**[1 mark]**
