Are you using the latest version of this specification?

- You will always find the most up-to-date version of this specification on our website at [aqa.org.uk/1350](https://www.aqa.org.uk/1350)
- We will write to you if there are significant changes to the specification.

1 Introduction

1.1 Why choose AQA for Level 3 Certificate Mathematical Studies

Maths is for everyone. It is diverse, engaging and essential in equipping students with the right skills to reach their future destination, whatever that may be. At AQA, we design qualifications and support to enable students to engage with, explore, enjoy and succeed in maths. By putting students at the heart of everything we do, our aim is to support teachers to shape what success in maths looks like for every student.

Our question papers are designed with students in mind. We're committed to ensuring that students are settled early in our exams and have the best possible opportunity to demonstrate their knowledge and understanding of maths, to ensure they achieve the results they deserve.

You can find out about all our Mathematics qualifications at [aqa.org.uk/maths](https://www.aqa.org.uk/maths)

1.2 Support and resources to help you teach

We know that support and resources are vital for your teaching and that you have limited time to find or develop good quality materials. So we've worked with experienced teachers to provide you with a range of resources that will help you confidently plan, teach and prepare for exams.

Teaching resources

We have too many Mathematical Studies resources to list here so visit [aqa.org.uk/1350](https://www.aqa.org.uk/1350) to see them all. They include:

- route maps to allow you to plan how to deliver the specification in the way that will best suit you and your students
- exemplar questions and mark schemes
- training courses to help you deliver AQA Mathematical Studies qualifications

Preparing for exams

Visit [aqa.org.uk/1350](https://www.aqa.org.uk/1350) for everything you need to prepare for our exams, including:

- past papers, mark schemes and examiners' reports
- specimen papers and mark schemes for new courses
- exemplar student answers with examiner commentaries.

Analyse your students' results with Enhanced Results Analysis (ERA)

Find out which questions were the most challenging, how the results compare to previous years and where your students need to improve. ERA, our free online results analysis tool, will help you see where to focus your teaching. Register at [aqa.org.uk/era](https://www.aqa.org.uk/era)

For information about results, including maintaining standards over time, grade boundaries and our post-results services, visit [aqa.org.uk/results](https://www.aqa.org.uk/results)

Keep your skills up to date with professional development

Wherever you are in your career, there's always something new to learn. As well as subject-specific training, we offer a range of courses to help boost your skills.

- Improve your teaching skills in areas including differentiation, teaching literacy and meeting Ofsted requirements.
- Prepare for a new role with our leadership and management courses.

You can attend a course at venues around the country, in your school or online – whatever suits your needs and availability. Find out more at coursesandevents.aqa.org.uk

Get help and support

2 Specification at a glance

This qualification is linear. Linear means that students will sit all the exams at the end of their course.

Subject content

Compulsory content

- 3.1 [Analysis of data](#) (page 13)
- 3.2 [Maths for personal finance](#) (page 14)
- 3.3 [Estimation](#) (page 16)
- 3.4 [Critical analysis of given data and models](#) (page 17)

Optional content

- 3.5 [The normal distribution](#) (page 18)
- 3.6 [Probabilities and estimation](#) (page 19)
- 3.7 [Correlation and regression](#) (page 20)
- 3.8 [Critical path and risk analysis](#) (page 21)
- 3.9 [Expectation](#) (page 22)
- 3.10 [Cost benefit analysis](#) (page 23)
- 3.11 [Graphical methods](#) (page 23)
- 3.12 [Rates of change](#) (page 24)
- 3.13 [Exponential functions](#) (page 25)

Assessments

Paper 1
What's assessed: <ul style="list-style-type: none">• 3.1• 3.2• 3.3
Assessed: <ul style="list-style-type: none">• written exam: 1 hour 30 minutes• 60 marks• scientific calculator or graphics calculator allowed (see section 5.9 for more information on calculators)
Questions: <p>copy of Preliminary Material available in advance on eAQA and clean copy of Preliminary Material to be provided in examination room</p> <p>formulae sheet available</p> <p>no optional questions</p>

Paper 2A: Statistical Techniques

What's assessed:

- 3.4
- 3.5
- 3.6
- 3.7

Students will be expected to draw on the mathematical content of paper 1.

Students will be expected to develop and demonstrate confidence and competence in the understanding and application of mathematical modelling in the solution of problems related to the use of statistical techniques.

Assessed:

- written exam: 1 hour 30 minutes
- 60 marks
- scientific calculator or graphics calculator allowed (see section 5.9 for more information on calculators)

Questions:

copy of Preliminary Material available in advance on eAQA and clean copy of Preliminary Material to be provided in examination room

formulae sheet available

statistical tables available

no optional questions

OR

Paper 2B: Critical Path and Risk Analysis**What's assessed:**

- 3.4
- 3.8
- 3.9
- 3.10

Students will be expected to draw on the mathematical content of paper 1.

Students will be expected to develop and demonstrate confidence and competence in the understanding and application of mathematical modelling in the solution of problems related to decision making and the planning of projects.

Assessed:

- written exam: 1 hour 30 minutes
- 60 marks
- scientific calculator or graphics calculator allowed (see section 5.9 for more information on calculators)

Questions:

copy of Preliminary Material available in advance on eAQA and clean copy of Preliminary Material to be provided in examination room

formulae sheet available

no optional questions

OR

Paper 2C: Graphical Techniques

What's assessed:

- 3.4
- 3.11
- 3.12
- 3.13

Students will be expected to draw on the mathematical content of paper 1.

Students will be expected to develop and demonstrate confidence and competence in the understanding and application of mathematical modelling in the solution of problems related to simple polynomial and exponential functions.

Assessed:

- written exam: 1 hour 30 minutes
- 60 marks
- scientific calculator or graphics calculator allowed (see section 5.9 for more information on calculators)

Questions:

copy of Preliminary Material available in advance on eAQA and clean copy of Preliminary Material to be provided in examination room

formulae sheet available

no optional questions

Total qualification time

- Guided learning hours: 180
- Total qualification time: 180

3 Subject content

Mathematics is, inherently, a sequential subject. There is a progression of material through all levels at which the subject is studied. It is assumed that students will already have confidence and competence in the content presented in standard type within the GCSE mathematics criteria. Students will make use of elements of this content when addressing problems within this Level 3 Certificate Mathematical Studies specification but this is not explicitly set out in subject content. This Level 3 Certificate Mathematical Studies specification aims to build on the knowledge, understanding and skills established in GCSE mathematics.

Subject content that is expected to be used throughout this specification is listed below:

- Knowledge and use of the formula $y = mx + c$. It is also expected that students will be able to find the gradient of a straight line connecting two different points.
- It is expected that spreadsheets and tables will be used throughout the teaching of this Level 3 Certificate Mathematical Studies specification. Spreadsheet formulae will include:
 - “=A1+A2+A3” to sum values in cells
 - “=2*B3” to multiply a value in a given cell
 - “=SUM(A1:A10)”
- Knowledge and use of the formulae for the circumference and the area of circle.
- Knowledge and use of the formulae for the perimeter of 2-D shapes, their areas and for calculating fractional areas of circles and composite shapes.
- Knowledge and use of the mathematical content of analysis of data and maths for personal finance elements.
- The ability to calculate surface areas of spheres, cones, pyramids and composite solids, including the application of the concepts of similarity including lengths in similar figures and Pythagoras’ theorem applied to 2-D and 3-D figures.
- Students will make use of elements of the content from paper 1 when addressing problems within each paper 2.

3.1 Analysis of data

Students will be expected to develop and demonstrate confidence and competence in the understanding and application of statistical techniques, interpreting data and drawing conclusions in the solution of problems.

D1 Data

	Content	Additional information
D1.1	appreciating the difference between qualitative and quantitative data	including the difference between discrete and continuous quantitative data
D1.2	appreciating the difference between primary and secondary data	including the use of secondary data that have been processed eg grouped

	Content	Additional information
D1.3	collecting quantitative and qualitative primary and secondary data	

D2 Collecting and sampling data

	Content	Additional information
D2.1	inferring properties of populations or distributions from a sample, whilst knowing the limitations of sampling	
D2.2	appreciating the strengths and limitations of random, cluster, stratified and quota sampling methods and applying this understanding when designing sampling strategies	appreciating that improving accuracy by removing bias and increasing sample size may cost/save both time and money

D3 Representing data numerically

	Content	Additional information
D3.1	calculating/identifying mean, median, mode, quartiles, percentiles, range, interquartile range, standard deviation	either from raw data or from cumulative frequency diagrams, stem-and-leaf diagrams or box plots
D3.2	interpreting these numerical measures and reaching conclusions based on these measures	

D4 Representing data diagrammatically

	Content	Additional information
D4.1	constructing and interpreting diagrams for grouped discrete data and continuous data, knowing their appropriate use and reaching conclusions based on these diagrams	including histograms with equal and unequal class intervals and cumulative frequency graphs, box and whisker plots, stem-and-leaf diagrams (including back-to-back)

3.2 Maths for personal finance

Students will be expected to develop and demonstrate confidence and competence in the understanding and application of the following calculations in the solution of problems relating to personal finance.

F1 Numerical calculations

	Content	Additional information
F1.1	substituting numerical values into formulae, spreadsheets and financial expressions	including bank accounts
F1.2	using conventional notation for priority of operations, including brackets, powers, roots and reciprocals	
F1.3	applying and interpreting limits of accuracy, specifying simple error intervals due to truncation or rounding	
F1.4	finding approximate solutions to problems in financial contexts	

F2 Percentages

	Content	Additional information
F2.1	interpreting percentages and percentage changes as a fraction or a decimal and interpreting these multiplicatively	
F2.2	expressing one quantity as a percentage of another	
F2.3	comparing two quantities using percentages	
F2.4	working with percentages over 100%	
F2.5	solving problems involving percentage change	including percentage increase/decrease and original value problems including simple and compound interest

F3 Interest rates

	Content	Additional information
F3.1	simple and compound interest	Annual Equivalent Rate (AER)
F3.2	savings and investments	

F4 Repayments and the cost of credit

	Content	Additional information
F4.1	student loans and mortgages	Annual Percentage Rate (APR)

F5 Graphical representation

	Content	Additional information
F5.1	graphical representation	plotting points to create graphs and interpreting results from graphs in financial contexts

F6 Taxation

	Content	Additional information
F6.1	income tax, National Insurance, Value Added Tax (VAT)	

F7 Solution to financial problems

	Content	Additional information
F7.1	the effect of inflation	Retail Price Index (RPI), Consumer Price Index (CPI)
F7.2	setting up, solving and interpreting the solutions to financial problems, including those that involve compound interest using iterative methods	
F7.3	currency exchange rates including commission	
F7.4	budgeting	

3.3 Estimation

Students should become familiar with and gain confidence in ideas concerning the formulation of mathematical models.

E1 The modelling cycle

	Content	Additional information
E1.1	representing a situation mathematically, making assumptions and simplifications	students will engage in the tackling of 'open' mathematical problem-solving where there may not be a clear single approach or 'correct' answer
E1.2	selecting and using appropriate mathematical techniques for problems and situations	
E1.3	interpreting results in the context of a given problem	
E1.4	evaluating methods and solutions including how they may have been affected by assumptions made	

E2 Fermi estimation

	Content	Additional information
E2.1	making fast, rough estimates of quantities which are either difficult or impossible to measure directly	

In estimation, questions could draw upon all the content of paper 1 and the content presented in standard type within GCSE mathematics criteria.

3.4 Critical analysis of given data and models (including spreadsheets and tabular data)

Students will be expected to use the data and models they are given and to be mathematically critical of these.

C1 Presenting logical and reasoned arguments in context

	Content	Additional information
C1.1	criticising the arguments of others	

C2 Communicating mathematical approaches and solutions

	Content	Additional information
C2.1	summarising and report writing	

C3 Analysing critically

	Content	Additional information
C3.1	comparing results from a model with real data	
C3.2	critical analysis of data quoted in media, political campaigns, marketing etc	

In addition to the content presented in standard type within GCSE mathematics criteria, students will be expected to draw on the mathematical content of analysis of data and maths for personal finance.

In critical analysis, questions will concentrate on the analysis of numerical and graphical data. Numerical data will usually be given in spreadsheet or tabular form.

3.5 The normal distribution

Students should be able to recognise that many things closely follow a Normal Distribution, eg heights of people, size of things produced by machines, errors in measurements, blood pressure, marks on a test etc. In these and similar situations, a graph of the distribution will have a 'bell' shaped curve.

S1 Properties of the normal distribution

	Content	Additional information
S1.1	knowledge that this is a symmetrical distribution and that the area underneath the normal 'bell' shaped curve represents probability	knowledge that approximately $\frac{2}{3}$ of observations lie within 1 standard deviation of the mean and that approximately 95% of observations lie within 2 standard deviations of the mean

S2 Notation

	Content	Additional information
S2.1	use of the notation $N(\mu, \sigma^2)$ to describe a normal distribution in terms of mean and standard deviation	use of the notation $N(0, 1)$ for the standardised normal distribution with mean = 0 and standard deviation = 1

S3 Calculating probabilities

	Content	Additional information
S3.1	using a calculator or tables to find probabilities for normally distributed data with known mean and standard deviation	the finding of an unknown mean or standard deviation by making use of percentage points will not be required

3.6 Probabilities and estimation

S4 Population and sample

	Content	Additional information
S4.1	understanding what is meant by the term 'population' in statistical terms	
S4.2	developing ideas of sampling to include the concept of a simple random sample from a population	

S5 The mean of sample size n

	Content	Additional information
S5.1	knowing that the mean of a sample is called a 'point estimate' for the mean of the population	appreciating that accuracy is likely to be improved by increasing the sample size

S6 Confidence intervals

	Content	Additional information
S6.1	confidence intervals for the mean of a normally distributed population of known variance using $\frac{\sigma^2}{n}$	confidence intervals will always be symmetrical the confidence level required and the sample size will always be stated

3.7 Correlation and regression

S7 Correlation

	Content	Additional information
S7.1	recognising when pairs of data are uncorrelated, correlated, strongly correlated, positively correlated and negatively correlated	
S7.2	appreciating that correlation does not necessarily imply causation	
S7.3	understanding the idea of an outlier	identifying and understanding outliers and make decisions whether or not to include them when drawing a line of best fit

S8 The product moment correlation coefficient (pmcc)

	Content	Additional information
S8.1	understanding that the strength of correlation is given by the pmcc	
S8.2	understanding that pmcc always has a value in the range from -1 to $+1$	
S8.3	appreciating the significance of a positive, zero or negative value of pmcc in terms of correlation of data	

S9 Regression lines

	Content	Additional information
S9.1	the plotting of data pairs on scatter diagrams and the drawing, by eye, of a line of best fit through the mean point	the idea of residuals will not be required
S9.2	understanding the concept of a regression line	
S9.3	plotting a regression line from its equation	
S9.4	using interpolation with regression lines to make predictions	

	Content	Additional information
S9.5	understanding the potential problems of extrapolation	

S10 Calculations

	Content	Additional information
S10.1	where raw data is given, students will be expected to use a calculator to calculate the pmcc and the equation of the regression line	calculations from grouped data will not be required

3.8 Critical path analysis

R1 Compound projects

	Content	Additional information
R1.1	representing compound projects by activity networks	
R1.2	activity-on-node representation will be used	

R2 Critical activities

	Content	Additional information
R2.1	using early time and late time algorithms to identify critical activities and find the critical path(s)	

R3 Gantt charts

	Content	Additional information
R3.1	using Gantt charts (cascade diagrams) to present project activities	

3.9 Expectation

R4 Probability

	Content	Additional information
R4.1	understanding that uncertain outcomes can be modelled as random events with estimated probabilities	knowing that the probabilities of an exhaustive set of outcomes sum to one
R4.2	applying ideas of randomness, fairness and equally likely events to calculate expected outcomes	

R5 Diagrammatic representations

	Content	Additional information
R5.1	understanding and applying Venn diagrams and simple tree diagrams	<ul style="list-style-type: none">• understanding that $P(A)$ means the probability of event A• understanding that $P(A')$ means the probability of not event A• understanding that $P(A \cup B)$ means the probability of event A or B or both• understanding that $P(A \cap B)$ means the probability of event A and B

R6 Combined events

	Content	Additional information
R6.1	calculating the probability of combined events: <ul style="list-style-type: none">• both A and B ;• neither A nor B ;• either A or B (or both)	to include independent and dependent events

R7 Expected value

	Content	Additional information
R7.1	calculating the expected value of quantities such as financial loss or gain	

3.10 Cost benefit analysis

R8 Living with uncertainty

	Content	Additional information
R8.1	understanding that many decisions have to be made when outcomes cannot be predicted with certainty	

R9 Control measures

	Content	Additional information
R9.1	understanding that the actions that can be taken to reduce or prevent specific risks may have their own costs	including the costs and benefits of insurance

R10 Risk analysis

	Content	Additional information
R10.1	using probabilities to calculate expected values of costs and benefits of decisions	other factors must be considered, for example <ul style="list-style-type: none"> • the regulatory framework (eg compulsory insurance) • minimising the maximum possible loss
R10.2	understanding that calculating an expected value is an important part of such decision making	

3.11 Graphical methods

G1 Graphs of functions

	Content	Additional information
G1.1	sketching and plotting curves defined by simple equations	knowing the shapes of the graphs of linear, quadratic, cubic and exponential functions will be expected

G2 Intersection points

	Content	Additional information
G2.1	plotting and interpreting graphs (including exponential graphs) in real contexts, to find approximate solutions to problems	including understanding the potential problems of extrapolation
G2.2	interpreting the solutions of equations as the intersection points of graphs and vice versa	

3.12 Rates of change

G3 Gradient

	Content	Additional information
G3.1	interpreting the gradient of a straight line graph as a rate of change	
G3.2	interpreting the gradient at a point on a curve as an instantaneous rate of change	understanding that some maximum and minimum points on curves occur where the gradient is zero
G3.3	estimating rates of change for functions from their graphs	

G4 Average speed

	Content	Additional information
G4.1	knowing that the average speed of an object during a particular period of time is given by $\frac{\text{distance travelled}}{\text{time taken}}$	

G5 Speed and acceleration

	Content	Additional information
G5.1	knowing that the gradient of a distance–time graph represents speed and that the gradient of a velocity–time graph represents acceleration	

3.13 Exponential functions

G6 The function a^x

	Content	Additional information
G6.1	using a calculator to find values of such a function	the laws of logarithms will not be required
G6.2	using a calculator log function to solve equations of the form $a^x = b$ and $e^{kx} = b$	

G7 The number e

	Content	Additional information
G7.1	understanding that e has been chosen as the standard base for exponential functions	knowing that the gradient at any point on the graph of $y = e^x$ is equal to the y value of that point

G8 Exponential growth and decay

	Content	Additional information
G8.1	formulating and using equations of the form $y = Ca^x$ and $y = Ce^{kx}$	
G8.2	using exponential functions to model growth and decay in various contexts	

4 Scheme of assessment

Find past papers and mark schemes, and specimen papers for new courses, on our website at aqa.org.uk/pastpapers

This specification is designed to be taken over two years with all assessments taken at the end of the course.

Level 3 Certificate Mathematical Studies exams and certification for this specification are available for the first time in May/June 2016 and then every May/June for the life of the specification.

This is a linear qualification. In order to achieve the award, students must complete all exams in May/June in a single year. All assessments must be taken in the same series.

All exams in mathematics must include questions that allow students to draw on elements from within and across different topic areas, and questions that allow students to provide extended responses.

All materials are available in English only.

4.1 Aims

This Level 3 Certificate Mathematical Studies qualification will consolidate students' mathematical understanding, build their confidence and competence in applying mathematical techniques to solve a range of problems and introduce them to new techniques and concepts that will prepare them for further study and future employment within a broad range of academic, professional and technical fields.

Mathematical Studies aims to prepare students for the mathematical demands of higher education and work where there is a distinct mathematical or statistical element, but where the mathematical demands do not stretch to a requirement for A-level mathematics.

A course of study leading to this qualification should enable students to:

- study a mathematics curriculum that is integrated with other areas of their study, work or interest leading to the application of mathematics in these areas
- develop mathematical modelling, evaluating and reasoning skills
- solve problems some of which will not be well defined and may not have a unique solution
- solve substantial and real life problems encountered by adults
- use ICT as an exploratory tool for developing mathematical understanding and when solving problems
- develop skills in the communication, selection, use and interpretation of their mathematics
- enjoy mathematics and develop confidence in using mathematics

4.2 Assessment objectives

The assessment objectives (AOs) have been set by AQA under guidance from the Department for Education and Ofqual.

The exams will measure how students have achieved the following assessment objectives.

AO1: Use and apply standard techniques

Students should be able to:

- Accurately recall facts, terminology and definitions
- Accurately carry out set tasks in contexts requiring single- and multi-step solutions

AO2: Select appropriate techniques to solve problems in a mathematical or non-mathematical context and analyse data and represent situations mathematically

Students should be able to:

- Select the mathematics required to solve a problem
- Analyse data and/or given information in order to draw conclusions
- Represent situations mathematically

AO3: Devise strategies to solve problems where the method is not obvious and communicate processes and results

Students should be able to:

- Devise strategies to solve problems where the method is not obvious
- Make realistic assumptions to enable solutions to be obtained
- Evaluate the reasonableness of a solution
- Communicate clearly using appropriate mathematical notation, language and diagrammatic representation

The balance of the assessment objectives may not be equal on each paper.

Weighting of assessment objectives for Level 3 Certificate Mathematical Studies

Assessment objectives (AOs)	Component weightings (approx %)		Overall weighting (approx %)
	Paper 1	Paper 2	
AO1	25-30	25-30	25-30
AO2	31-40	31-40	31-40
AO3	31-40	31-40	31-40
Overall weighting of components	50	50	100

4.3 Assessment weightings

The marks awarded on the papers will be scaled to meet the weighting of the components. Students' final marks will be calculated by adding together the scaled marks for each component. Grade boundaries will be set using this total scaled mark. The scaling and total scaled marks are shown in the table below.

Component	Maximum raw mark	Scaling factor	Maximum scaled mark
Paper 1	60	x1	60

Component	Maximum raw mark	Scaling factor	Maximum scaled mark
Paper 2A (Statistical techniques) or Paper 2B (Critical path and risk analysis) or Paper 2C (Graphical techniques)	60	x1	60
		Total scaled mark:	120

5 General administration

You can find information about all aspects of administration, as well as all the forms you need, at aqa.org.uk/examsadmin

5.1 Entries and codes

You only need to make one entry for each qualification – this will cover all the question papers and certification.

Every specification is given a national discount (classification) code by the Department for Education (DfE), which indicates its subject area.

If a student takes two specifications with the same discount code, Further and Higher Education providers are likely to take the view that they have only achieved one of the two qualifications. Please check this before your students start their course.

Qualification title	Option	AQA entry code	DfE discount code
AQA Level 3 Certificate Mathematical Studies	with Statistical techniques	1350A	2350
AQA Level 3 Certificate Mathematical Studies	with Critical path and risk analysis	1350B	2350
AQA Level 3 Certificate Mathematical Studies	with Graphical techniques	1350C	2350

This specification complies with Ofqual's *General Conditions of Recognition* and all relevant regulatory documents.

The Ofqual qualification accreditation number (QAN) is 601/4945/0

5.2 Overlaps with other qualifications

There is some overlap between this specification and AQA's GCSE Mathematics, AQA's GCSE Statistics and with AQA's Functional Skills qualifications in Mathematics at Level 1 and Level 2. Some overlap also exists with this specification and AQA's Level 2 Certificate in Further Mathematics and with AQA's suite of Free-Standing Mathematics Qualifications (FSMQs).

5.3 Awarding grades and reporting results

The Level 3 Certificate qualification will be graded on a five-point scale: A, B, C, D and E.

Students who fail to reach the minimum standard for grade E will be recorded as U (unclassified) and will not receive a qualification certificate.

5.4 Re-sits and shelf life

Students can re-sit the qualification as many times as they wish, within the shelf life of the qualification.

5.5 Previous learning and prerequisites

Mathematics is, inherently, a sequential subject. There is a progression of material through all levels at which the subject is studied.

It is expected that students engaging on a course of study leading to this qualification will have already achieved a 'good' pass (currently grade C or above) in GCSE mathematics or an equivalent level 1/2 qualification.

Hence, it is assumed that all students will have competence and confidence in the content presented in standard type in the Department for Education's GCSE mathematics content and assessment objectives document. This is the content listed as basic foundation content in the AQA GCSE mathematics specification (8300) for exams from 2017 onwards. Students will make use of this content when addressing problems within the assessment of this specification but this content is not explicitly set out in this specification. All other content required for this specification is listed in section 3 of this specification.

5.6 Access to assessment: diversity and inclusion

General qualifications are designed to prepare students for a wide range of occupations and further study. Therefore our qualifications must assess a wide range of competences.

The subject criteria have been assessed to see if any of the skills or knowledge required present any possible difficulty to any students, whatever their ethnic background, religion, sex, age, disability or sexuality. If any difficulties were encountered, the criteria were reviewed again to make sure that tests of specific competences were only included if they were important to the subject.

As members of the Joint Council for Qualifications (JCQ) we participate in the production of the JCQ document *Access Arrangements and Reasonable Adjustments: General and Vocational qualifications*. We follow these guidelines when assessing the needs of individual students who may require an access arrangement or reasonable adjustment. This document is published on the JCQ website at jcq.org.uk

Students with disabilities and special needs

We can make arrangements for disabled students and students with special needs to help them access the assessments, as long as the competences being tested are not changed. Access arrangements must be agreed **before** the assessment. For example, a Braille paper would be a reasonable adjustment for a Braille reader but not for a student who does not read Braille.

We are required by the Equality Act 2010 to make reasonable adjustments to remove or lessen any disadvantage that affects a disabled student.

If you have students who need access arrangements or reasonable adjustments, you can apply using the Access arrangements online service at aqa.org.uk/eaqa

Special consideration

We can give special consideration to students who have been disadvantaged at the time of the assessment through no fault of their own – for example a temporary illness, injury or serious problem such as the death of a relative. We can only do this **after** the assessment.

Your exams officer should apply online for special consideration at [aqa.org.uk/eaqa](https://www.aqa.org.uk/eaqa)

For more information and advice about access arrangements, reasonable adjustments and special consideration please see [aqa.org.uk/access](https://www.aqa.org.uk/access) or email accessarrangementsqueries@aqa.org.uk

5.7 Working with AQA for the first time

If your school or college has not previously offered any AQA specification, you need to register as an AQA centre to offer our specifications to your students. Find out how at [aqa.org.uk/becomeacentre](https://www.aqa.org.uk/becomeacentre)

If your school or college is new to this specification, please let us know by completing an Intention to enter form. The easiest way to do this is via e-AQA at [aqa.org.uk/eaqa](https://www.aqa.org.uk/eaqa)

5.8 Private candidates

A private candidate is someone who enters for exams through an AQA-approved school or college but is not enrolled as a student there.

If you are a private candidate you may be self-taught, home-schooled or have private tuition, either with a tutor or through a distance learning organisation. You must be based in the UK.

If you have any queries as a private candidate, you can:

- speak to the exams officer at the school or college where you intend to take your exams
- visit our website at [aqa.org.uk/examsadmin](https://www.aqa.org.uk/examsadmin)
- email: privatecandidates@aqa.org.uk

5.9 Materials for use in the examination

For all question papers, students are expected to write in black pen and have mathematical instruments available for use in the exam. These instruments are defined as:

- pencil (for use in diagrams only - no colour pencils)
- ruler
- pair of compasses
- protractor

Calculators are allowed in all papers in this specification. The rules are the same as for any other examination – please see the JCQ document *Instructions for Conducting Examinations* for further details.

Most models of scientific or graphics calculator are allowed. However, calculators that feature a 'Computer Algebra System' (CAS) are not allowed. It is usually clear from the manufacturer's specifications whether a model has this feature.

It is expected that students are familiar with the use of a scientific calculator or a graphics calculator. They should also use a scientific calculator when studying this specification and sitting its exams.

Preliminary Materials will be available in advance of the examination via eAQA, for issue from 1 March each year. A clean copy of the Preliminary Material will be provided as an insert to the examination paper. Students must not take a copy of their pre-release Preliminary Material into the examination room.

A formulae sheet will be provided for use with all Mathematical Studies exams.

A statistical tables sheet will be provided for use with paper 2A only.

6 Grade descriptions

These descriptions give a general indication of the level of attainment characteristic of each grade. These descriptions should be interpreted in relation to the content outlined in the Subject Content section of this specification; they are not designed to define that content.

The grade awarded will depend on how well the student has met the assessment objectives (see the Scheme of Assessment section). If a student has performed less well in some areas, this may be balanced by better performances in others.

Level 3 Certificate Mathematical Studies

Grade A

Within the context of Level 3 Certificate Mathematical Studies, students demonstrate a good understanding and knowledge of the mathematical facts, concepts and techniques that are needed, drawing on the full range of defined and assumed content to carry out set tasks successfully.

Students manipulate mathematical expressions and use graphs, sketches, tables and diagrams, all with high accuracy and skill. They use mathematical language and symbols correctly and effectively in representing situations mathematically. When confronted with unstructured problems, they can often devise and implement an effective solution strategy, communicating it appropriately and effectively. If errors are made in their calculations or logic, these are sometimes noticed and corrected.

Students recall or recognise almost all the standard models and techniques that are needed, and select appropriate ones to represent a wide variety of situations in the real world. They correctly refer results from calculations using the model to the original situation; they give sensible interpretation of their results in the context of the original situation. Their responses include mathematical justifications, explaining their solutions to problems involving a number of features or variables. They make intelligent comments on the modelling assumptions and suggest possible refinements to the model.

Students understand how almost all situations presented in the examination may be translated into mathematics. They correctly refer the results of calculations back to the given context and usually make sensible comments or predictions. They can distil the essential mathematical requirements from given data or other mathematical information.

Students make appropriate and efficient use of contemporary calculator technology and other permitted resources, and are aware of any limitations to their use. They present results to an appropriate degree of accuracy without prompting.

Grade E

Within the context of Level 3 Certificate Mathematical Studies, students demonstrate some understanding and knowledge of the mathematical facts, concepts and techniques required, showing competence and confidence in applying assumed content and some technical fluency with the defined content.

Students manipulate mathematical expressions and use graphs, sketches, tables and diagrams, all with some accuracy and skill. They sometimes use mathematical language correctly to represent situations and the processes they use in working through well-defined problems can be followed.

Students recall or recognise some of the standard models and techniques that are needed and sometimes select appropriate ones to represent a variety of situations in the real world. They sometimes correctly refer results from calculations using the model to the original situation; they try to interpret their results in the context of the original situation, but make little comment on possible refinements to a model.

Students sometimes understand how situations presented in the examination may be translated into mathematics. They sometimes correctly refer the results of calculations back to the given context and attempt to give comments or predictions. They distil some of the essential mathematical requirements from given data or other mathematical information.

Students often make appropriate and efficient use of contemporary calculator technology and other permitted resources. They sometimes present results to an appropriate degree of accuracy without prompting.

7 Formulae sheet

These formulae are not required to be learnt. A clean copy of this formulae sheet will be issued to you in the examination.

7.1 Volume and surface area

Shape	Volume	Surface area
Cone	$V = \frac{1}{3}\pi r^2 h$	$A = \pi r l + \pi r^2$
Sphere	$V = \frac{4}{3}\pi r^3$	$A = 4\pi r^2$
Pyramid	$V = \frac{1}{3} \text{ base} \times h$	

7.2 Financial calculation - AER

The annual effective interest rate (AER), r , is given by

$$r = \left(1 + \frac{i}{n}\right)^n - 1$$

where i is the nominal interest rate, and n is the number of compounding periods per year.

Note: the values of i and r should be expressed as decimals.

7.3 Financial calculation - APR

The annual percentage interest rate (APR) is given by

$$C = \sum_{k=1}^m \left(\frac{A_k}{(1+i)^{t_k}} \right)$$

where $\text{£}C$ is the amount of the loan, m is the number of repayments, i is the APR expressed as a decimal, $\text{£}A_k$ is the amount of the k th repayment, t_k is the interval in years between the start of the loan and the k th repayment.

It may be assumed that there are no arrangement or exit fees.

8 Statistical tables

These statistical tables are required for use in paper 2A only.

8.1 Table 1 – Normal distribution function

The table gives the probability, p , that a normally distributed random variable Z , with mean = 0 and variance = 1, is less than or equal to z .

z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09	z
