

# Teaching guide: Estimates and significant figures

Mathematics for GCSE Science

---

This resource helps you to deliver the mathematical requirements that students are required to demonstrate in the new GCSE Science specifications. It consists of a teaching guide and PowerPoint presentation.

## 1. Arithmetic and numerical computation

**Science GCSE subject criteria Maths skill:** 1d. Make estimates of the results of simple calculations

<p>1. Brief explanation</p>	<ul style="list-style-type: none"> <li>Mental estimates are used frequently in Maths; often before the exact calculation is done on a calculator. They are used to give a ball-park figure for the final answer.</li> <li>In Maths the word 'Estimate' in a question generally means 'round each number to 1 significant figure before performing the calculation'.</li> <li><b>Some IGCSE Maths specifications do not require non-calculator skills so these students may need extra assistance with this topic.</b></li> </ul>
<p>2. Statement of coverage from: KS3 Mathematics programme of study (POS)  KS4 Mathematics programme of study (POS)</p>	<ul style="list-style-type: none"> <li>Use approximation through rounding to estimate answers and calculate possible resulting errors expressed using inequality notation <math>a &lt; x \leq b</math></li> <li>Apply and interpret limits of accuracy when rounding or truncating, <b>{including upper and lower bounds}</b>.</li> </ul>
<p>3. Maths introduction and development</p>	<ul style="list-style-type: none"> <li>Mental arithmetic is introduced from when a student first starts school and is developed through to KS3.</li> <li>Rounding is first done to 'nearest whole number', nearest 10', etc. before moving on to the introduction of decimal places and significant figures.</li> </ul>
<p>4. Ref AQA All About Maths <a href="#">AQA All About Maths Rounding</a></p>	<p><a href="#">NEW GCSE Maths (8300)</a> &gt; <a href="#">Foundation tier resources</a> &gt; <a href="#">Number</a> &gt; <a href="#">Rounding</a></p> <p><b>Lesson 1</b> – Rounding remainder; leading to decimal places.  <b>Lesson 2</b> – Rounding to a number of significant figures.  <b>Lesson 3</b> – Upper and lower bounds.  <b>Lesson 4</b> – Use of inequality signs; truncating rather than rounding; and appropriate rounding.</p>
<p>5. Misconceptions</p>	<p>These tend to occur when rounding the number rather than the actual calculation.  eg What is 14 489 to the nearest 10 000?  A student may do this:  14 489 to the nearest 10 is 14 490</p>

	<p>14 490 to the nearest 100 is 14 500</p> <p>14 500 to the nearest 1000 is 15 000</p> <p>15 000 to the nearest 10 000 is 20 000</p> <p>They do it in stages rather than just one step. The correct answer is 10 000.</p>
6. Some examples of where it is applied in science	<p><b>Biology</b>      Animal and plant cells</p> <p>                          Culturing microorganisms (Biology only)</p> <p><b>Chemistry</b>     Sizes of particles and their properties (Chemistry only)</p> <p>                          Calculating rates of reactions</p> <p>                          Chromatography</p> <p><b>Physics</b>         Acceleration</p> <p>                          Newton's Second Law</p> <p>                          Factors affecting braking distance</p>

## 2. Handling data

**Science GCSE subject criteria Maths skill:** 2a. Use an appropriate number of significant figures

<p>1. Brief explanation</p>	<ul style="list-style-type: none"> <li>Mental estimates are used frequently in Maths; often before the exact calculation is done on a calculator. They are used to give a ball-park figure for the final answer.</li> <li>Students need to be able to round a number to any number of significant figures and decide on the most appropriate number in each situation.</li> <li><b>Some IGCSE Maths specifications do not require non-calculator skills so these students may need extra assistance with this topic.</b></li> </ul>
<p>2. Statement of coverage from: KS3 Mathematics programme of study (POS)  KS4 Mathematics programme of study (POS)</p>	<ul style="list-style-type: none"> <li>Round numbers and measures to an appropriate degree of accuracy [for example, to a number of decimal places or significant figures]</li> <li>Apply and interpret limits of accuracy when rounding or truncating, {including upper and lower bounds}.</li> </ul>
<p>3. Maths introduction and development</p>	<ul style="list-style-type: none"> <li>Rounding is first taught to 'nearest whole number', nearest 10', etc. before moving on to the introduction of decimal places and significant figures.</li> <li>Students learn that answers often need to be rounded and that an answer should be to a similar degree of accuracy (have same number of significant figures) as the original numbers.</li> </ul>
<p>4. Ref AQA All About Maths <a href="#">AQA All About Maths Rounding</a></p>	<p><a href="#">NEW GCSE Maths (8300)</a> &gt; <a href="#">Foundation tier resources</a> &gt; <a href="#">Number</a> &gt; <a href="#">Rounding</a></p> <p><b>Lesson 1</b> – Rounding reminder; leading to decimal places.  <b>Lesson 2</b> – Rounding to a number of significant figures.  <b>Lesson 3</b> – Upper and lower bounds.  <b>Lesson 4</b> – Use of inequality signs; truncating rather than rounding; and appropriate rounding.</p>
<p>5. Misconceptions</p>	<p>These tend to occur when rounding the number rather than the actual calculation.  eg What is 14 489 to 2 s.f.?  A student may do this:  14 489 to 14 490  14 490 to 14 500</p>

	<p>14 500 to 15 000</p> <p>They do it in stages rather than just one step. The correct answer is 14 000.</p>
<p>6. Some examples of where it is applied in science</p>	<p><b>Biology</b>      Culturing microorganisms (Biology only)                               Plant organ system</p> <p><b>Chemistry</b>    Moles (HT only)                               Percentage yield (Chemistry only)                               Chromatography</p>
