Level 3 Certificate and Extended Certificate in Applied Science

SCIENCE IN THE MODERN WORLD

Unit Number: ASC3

Friday 26 January 2018 Afternoon Time allowed: 1 hour 30 minutes

Materials
For this paper you must have:
• a clean copy of pre-released Sources A, B, C and D.
• a calculator.

Instructions
• Use black ink or black ball-point pen.
• Answer all questions.
• You must answer the questions in the spaces provided.
• Do not write outside the box around each page or on blank pages.
• Do all rough work in this book.
• Cross through any work you do not want to be marked.

Information
• You will be provided with copies of pre-released Sources A, B, C and D.
• There are two sections in this paper – Section A and Section B.
• You should answer all questions in each section.
• You should spend approximately 1 hour on Section A and 30 minutes on Section B.
• The marks for questions are in brackets.
• The maximum mark for this paper is 60.

Advice
Read each question carefully.

Please write clearly in block capitals.

TOTAL __________
Microplastics are defined as pieces of plastic smaller than 5 mm in size. Microbeads are one example of microplastics that can cause marine pollution. Use **Sources A** and **B** to answer the following questions.

0 1 Give two other examples of where microplastics come from. **[2 marks]**

0 1 - 2 Explain why microbeads have been chosen as the starting point for tackling the problems caused by microplastics. **[2 marks]**
01.3 Give four reasons why the small size of microbeads and the materials they are made of cause problems.

[4 marks]

1. ____________________________________________

2. ____________________________________________

3. ____________________________________________

4. ____________________________________________

01.4 Why is microplastic pollution considered to be a global problem?

[2 marks]

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________
**Source A** suggests that microplastics might be a potential health risk for humans.

Use **Source A** to answer the following questions.

**02.1** What evidence is used to demonstrate the potential health risk for humans?  
[1 mark]

________________________________________________________________________________
________________________________________________________________________________

**02.2** Suggest why Chinese people might be more at risk than people of other nationalities.  
[1 mark]

________________________________________________________________________________
________________________________________________________________________________

**02.3** Microplastics erode into nanoplastics.  
Why might this be a greater health risk to humans?  
[1 mark]

________________________________________________________________________________
________________________________________________________________________________

**03** It is possible that all the microbeads used in cosmetic products in the UK each year could end up in the sea.

Use the summary in **Source B** to calculate the percentage of microplastics entering the sea from Europe each year that could come from microbeads in the UK.

Give your answer as a range.  
[4 marks]

Range = ________ % to ________ %
One of the conclusions in Source B is that it is important that products containing microbeads are labelled clearly.

Give one reason why labelling is important for consumers.

[1 mark]

________________________________________________________________________________
________________________________________________________________________________

Give one reason why cosmetics manufacturers might be reluctant to label products containing microbeads.

[1 mark]

________________________________________________________________________________
________________________________________________________________________________

Source B concludes that a ban on microbeads is only the first part of the solution to microplastic pollution.

What statistical evidence supports this?

[1 mark]

________________________________________________________________________________
________________________________________________________________________________

Other than a ban on microbeads, give four measures that would reduce microplastic pollution.

Use Sources A and B to support your answer.

[4 marks]

1 ______________________________________________________________________________
________________________________________________________________________________

2 ______________________________________________________________________________
________________________________________________________________________________

3 ______________________________________________________________________________
________________________________________________________________________________

4 ______________________________________________________________________________
________________________________________________________________________________
In Source C, Dr John Ugelstad was hailed as a hero in the 1980s but might now be compared to the inventors of asbestos and leaded petrol.

Explain why.

[3 marks]
In Source D, Dr Friedman disagrees with a ban on microbeads.

In Dr Friedman’s opinion, a ban on microbeads ‘could potentially do more harm than good’. Explain why. [2 marks]

Dr Friedman refers to a ‘non-peer-reviewed editorial in support of a microbead ban’.

Suggest why he has made a point of referring to it as ‘non-peer-reviewed’. [2 marks]

Explain what Dr Friedman believes could have been an alternative to a ban on microbeads. [2 marks]
Discuss the validity of **Sources A, B, C and D** and their effectiveness in terms of the information they provide, the language used, and the audience for whom they are intended.

Use evidence from the sources in your answer.

The Quality of Written Communication will be assessed in your answer.

[9 marks]
Section B

Table 1 shows the amount of money spent in the UK on environmental protection. It is measured in millions of pounds per year. Table 1 shows figures for alternate years from 2000 to 2014.

<table>
<thead>
<tr>
<th>Environmental protection activity</th>
<th>Environmental expenditure (£ millions / year)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Household waste management</td>
<td>4 870</td>

________________________________________________________________________________
________________________________________________________________________________

09.2 Calculate the percentage of the total environmental expenditure spent on household waste management in 2014. [1 mark]

Total environmental expenditure = ___________________________ %

09.3 In 2014 household waste in the UK amounted to 28.6 million tonnes. Use information from Table 1 to calculate the cost per tonne of managing household waste in 2014. [2 marks]

Cost per tonne = £ _______
Table 2 shows figures for recycling of waste packaging materials in the UK in 2014.

<table>
<thead>
<tr>

Which packaging material is the UK the best at recycling and which packaging material is the UK the worst at recycling?

Use the information in Table 2.

[2 marks]

Best: ______________________________________

Worst: _____________________________________

Discuss what the information in Table 2 tells you about metal waste packaging and its recycling.

[4 marks]

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________
Some waste packaging materials are processed and used as an energy source.

Suggest two packaging materials in Table 2 that are most likely to be used as an energy source.

Material 1: ________________________________________________________________

Material 2: ________________________________________________________________

The Environment Agency (EA) is a government organisation that was established in 1996 to improve the environment for the benefit of people and wildlife.

One responsibility of the EA is to monitor waste from industry which may be discharged into rivers.

Describe one role that each of these scientists, working for the EA, might play in the monitoring of this waste.
