At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.
For this paper you must have:
• a ruler
• a scientific calculator.

INSTRUCTIONS

• Use black ink or black ball-point pen.

• Answer ALL questions in the spaces provided.

• Do all rough work in this book. Cross through any work you do not want to be marked.

• In all calculations, show clearly how you work out your answer.
INFORMATION

• There are 100 marks available on this paper.

• The marks for questions are shown in brackets.

• You are expected to use a calculator where appropriate.

• You are reminded of the need for good English and clear presentation in your answers.

DO NOT TURN OVER UNTIL TOLD TO DO SO
Many human actions are reflexes.

Which TWO of the following are examples of reflex actions? [2 marks]

Tick TWO boxes.

- Jumping in the air to catch a ball
- Raising a hand to protect the eyes in bright light
- Releasing saliva when food enters the mouth
- Running away from danger
- Withdrawing the hand from a sharp object
FIGURE 1 shows how the size of the pupil of the human eye can change by reflex action.

**FIGURE 1**

Name ONE stimulus that would cause the pupil to change in size from A to B, as shown in FIGURE 1. [1 mark]

Structure Q causes the change in size of the pupil.

Name structure Q. [1 mark]
Describe how structure Q causes the change in the size of the pupil from A to B. [1 mark]
FIGURE 2 shows some structures involved in the coordination of a reflex action.

FIGURE 2

Describe how the structures shown in FIGURE 2 help to coordinate a reflex action. [6 marks]

TABLE 1
Many scientists think that an increase in carbon dioxide concentration in the atmosphere causes an increase in air temperature.

How would an increase in the concentration of carbon dioxide in the atmosphere cause an increase in air temperature? [1 mark]
Evaluate evidence for and against the theory that an increase in the concentration of carbon dioxide in the atmosphere causes an increase in air temperature.

Use data from FIGURE 3, on page 11, and your own knowledge. [4 marks]

__________________________________________

Volume lost in faeces =
__________________________________________ cm³

[Turn over]
FIGURE 4, on pages 20 and 21, shows that one method of gaining water is by metabolism.

Which metabolic process produces water? [1 mark]

Tick ONE box.

- Breakdown of protein to amino acids
- Changing glycogen into glucose
- Digestion of fat
- Respiration of glucose
The next day, the person ran a 10-kilometre race.

The volume of water lost from the body through the skin and by breathing increased.

03.3 Explain why more water was lost through the skin during the race. [2 marks]

[Turn over]
Why did the students place the quadrats at random positions? [1 mark]
Estimate the total number of dandelion plants in the field.
Calculate your answer using information from FIGURE 5 and TABLE 2.
Give your answer in standard form. [5 marks]

Total number of dandelion plants =
Quadrats 5, 7 and 8 were each placed less than 10 metres from the woodland.

These quadrats contained low numbers of dandelion plants.

The students made the hypothesis:

‘Light intensity affects the number of dandelion plants that grow in an area.’

Plan an investigation to test this hypothesis. [6 marks]
Light is an environmental factor that affects the growth of dandelion plants.

Give TWO other environmental factors that affect the growth of dandelion plants. [2 marks]

</table>
Bluebell plants grow in woodlands in the UK.

- Bluebells can reproduce sexually by producing seeds.
- Bluebells can also reproduce asexually by making new bulbs.

One advantage of asexual reproduction for bluebells is that only ONE parent is needed.

Suggest TWO other advantages of asexual reproduction for bluebells. [2 marks]

1 ________________________________

____________________________________

____________________________________

2 ________________________________

____________________________________

____________________________________
Explain why sexual reproduction is an advantage for bluebells. [4 marks]
Some students investigated geotropism in the roots of bean seedlings.

FIGURE 6 shows the apparatus used.

FIGURE 6

- Cork mat
- Damp blotting paper
- Apparatus A Stationary
- Rotates Bean seedlings
- Pin
- Motor
- Apparatus B Rotating
This is the method used.

1. Measure the length of the root of each of 10 bean seedlings.

2. Pin 5 seedlings to the cork mat in apparatus A.

3. Pin 5 seedlings to the cork mat in apparatus B.

4. Leave A and B in a dark cupboard for 2 days.

5. After the 2 days:
   • make a drawing to show the appearance of each seedling
   • measure the length of the root of each seedling.

[Turn over]
Why did the students surround the seedlings with damp blotting paper? [1 mark]

Tick ONE box.

☐ To prevent light affecting the direction of root growth

☐ To prevent photosynthesis taking place in the roots

☐ To prevent the growth of mould on the roots

☐ To prevent water affecting the direction of root growth

[Turn over]
Apparatus B is a control.
Apparatus B rotates slowly.

How does apparatus B act as a control?
[1 mark]

[Turn over]
One student stated: ‘The mean length change for the seedlings in apparatus B is NOT valid.’

Suggest the reason for the student’s statement.

[1 mark]
Suggest ONE improvement the students could make to obtain a more valid mean length change for the seedlings in apparatus B. [1 mark]
FIGURE 7 shows the students’ drawings of two seedlings at the end of the 2 days.

FIGURE 7

Seedling from Apparatus A

Seedling from Apparatus B

A plant hormone is made in the root tip.

The hormone diffuses from the tip into the tissues of the root.

Explain how the hormone causes the appearance of the seedlings in FIGURE 7 to be different.
You should refer to BOTH seedlings in your answer. [3 marks]
In horticulture plant hormones are used for controlling plant growth.

Draw ONE line from each plant hormone to the correct use of that hormone. [3 marks]
<table>
<thead>

Percentage fat in milk

[Turn over]
A student suggested:

‘The percentage of fat in milk is controlled by one dominant allele and one recessive allele.’

How many different phenotypes would this produce? [1 mark]

Tick ONE box.

2  3  22  46

Give the evidence from FIGURE 10, on page 61, which shows the percentage of fat in the milk is controlled by several genes. [1 mark]

[Turn over]
One of the genes codes for an enzyme used in fat metabolism.

A mutation in this gene causes a reduction in milk fat.

The mutation changes one amino acid in the enzyme molecule.

Explain how a change in one amino acid in an enzyme molecule could stop the enzyme working. [3 marks]
The scientists found one cow with a mutation.

The cow’s milk contained only 2.9% fat.

FIGURE 11 shows the percentage of fat in the milk of cattle related to the cow with the mutation.

The values for male cattle are the mean values of their female offspring.
Animal 8 is homozygous.

The mutation in animal 7 produced a dominant allele for making low-fat milk.

Give evidence from FIGURE 11 that animal 7 is heterozygous. [1 mark]
Animals 7 and 8 produced 11 offspring. These offspring were produced by in vitro fertilisation (IVF).

The embryos from IVF were transferred into 11 other cows.

Suggest why IVF and embryo transfer were used rather than allowing animals 7 and 8 to mate naturally. [1 mark]
BLANK PAGE
Draw a Punnett square diagram to show a cross between animals 7 and 8.

Identify which offspring produce low-fat milk and which offspring produce high-fat milk.

[4 marks]

Use the following symbols:

D = dominant allele for making low-fat milk

d = recessive allele for making high-fat milk
The scientists want to produce a type of cattle that makes large volumes of low-fat milk.

The scientists will selectively breed some of the animals shown in FIGURE 11.

Describe how the scientists would do this. [4 marks]
FIGURE 12 shows a ring-tailed lemur.

TABLE 5 shows part of the classification of the ring-tailed lemur.

Complete TABLE 5 to give the names of the missing classification groups. [2 marks]
TABLE 5

<table>
<thead>
<tr>
<th>CLASSIFICATION GROUP</th>
