**GCSE Combined Science: Synergy (8465)**

## **Physics Equations Sheet**

**[Turn over]**

1	<p><b>(final velocity)<sup>2</sup> – (initial velocity)<sup>2</sup></b>  <b>= 2 × acceleration × distance</b></p>	$v^2 - u^2 = 2 a s$
2	<p><b>elastic potential energy</b>  <b>= 0.5 × spring constant × (extension)<sup>2</sup></b></p>	$E_e = \frac{1}{2} k e^2$
3	<p><b>change in thermal energy</b>  <b>= mass × specific heat capacity × temperature change</b></p>	$\Delta E = m c \Delta \theta$
4	<p><b>period = <math>\frac{1}{\text{frequency}}</math></b></p>	$T = \frac{1}{f}$

5	<p>force on a conductor (at right angles to a magnetic field) carrying a current          = magnetic flux density × current × length</p>	$F = B I l$
6	<p>thermal energy for a change of state          = mass × specific latent heat</p>	$E = m L$
7	<p>potential difference across primary coil          × current in primary coil          = potential difference across secondary coil          × current in secondary coil</p>	$V_p I_p = V_s I_s$

Equations 5 and 7 are for Higher Tier only.
