Materials
For this paper you must have:
• mathematical instruments
You must **not** use a calculator.

Instructions
• Use black ink or black ball-point pen. Draw diagrams in pencil.
• Fill in the boxes at the top of this page.
• Answer all questions.
• You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
• Do all rough work in this book. Cross through any work you do not want to be marked.

Information
• The marks for questions are shown in brackets.
• The maximum mark for this paper is 80.
• You may ask for graph paper, tracing paper and more answer paper. These must be tagged securely to this answer book.

Advice
In all calculations, show clearly how you work out your answer.

17 (a) Laura wants to work out 3% of 1700
Her method is $1700 \times 0.3$
Is her method correct?
Tick a box.

Yes   No

Give a reason for your answer.

17 (b) Laura also wants to work out $\frac{30}{29}$ of 60
Her answer is 58
Is her answer correct?

(a) The airport was affected by fog on one of the days. Which day do you think it was? Give a reason for your answer. [1 mark]

Day: ________
Reason: ____________________________

(b) Kim uses the data to predict how many planes will land at the airport in a year. In her method, she uses an estimate of 150 planes in each 4-hour period throughout the day and assumes the same number of planes each day. Work out her prediction. [3 marks]

Answer: ____________________________
In fact,

fewer planes land in winter than in summer
fewer planes land at night than during the day.

What does this tell you about Kim’s prediction?
Tick one box.

- Her prediction is too low
- Her prediction is too high
- Her prediction could be too low or too high

Give a reason for your answer.

The sum of the angles in any quadrilateral is $360^\circ$
For example, in a rectangle $4 \times 90^\circ = 360^\circ$

Zak writes,
$5 \times 90^\circ = 450^\circ$ so the sum of the angles in any pentagon must be $450^\circ$

Is he correct?
