Paper 2 How the economy works

---

**Mark scheme**

June 2019

---

Version 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from [aqa.org.uk](http://aqa.org.uk)

## Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor for the level shows the average performance for the level. There are marks in each level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

### Step 1 Determine a level

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level. The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, i.e. if the response is predominantly level 3 with a small amount of level 4 material it would be placed in level 3 but be awarded a mark near the top of the level because of the level 4 content.

### Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the Indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

**Indicative content:**

- Outsourcing leading to job losses as firms will seek countries with lower wages to outsource production to enable them to profit from the savings but generating unemployment in the home country.
- Lower GDP as countries move to cheaper locations – if countries cannot hold on to their domestic businesses (often due to outsourcing or lower tax rates elsewhere) then there will be a negative effect on GDP and possible multiplier effects on the economy.
- Lower tax revenue as firms will look to move operations to countries with lower tax rates thus the tax base of the home country will be reduced due to legal tax avoidance.
- Wage pressure downwards due to inflow of labour – especially from low wage economies and this will mean the extra labour supply sees wages falling in the economy
- Cheaper goods and services for consumers as consumers can buy from a global market and this increased competition will mean consumers can demand lower prices (or simply buy from low-cost producing countries).
- Lower cost for business producers if they utilise cheaper imports or cheaper wages and this will enable them to expand profitably.
- Allows countries to specialise in their natural advantages – with lower trade barriers and easier trade due to transport/communication improvement, countries can specialise in their comparative advantages.
- Larger markets for businesses – exports contribute an increasing proportion to the UK’s GDP.

Possible issues for evaluation include:

- There are always winners and losers in most changes – consumers often win but workers in ‘threatened’ industries may lose.

|  |  |  |
|--|--|--|
|  | <ul style="list-style-type: none"> <li>• People can win and lose at the same time – e.g. good for consumers but bad for workers.</li> <li>• What’s good for the economy is difficult to judge as there are lots of differently affected groups</li> <li>• It may help achieve some but not all the principal economic objectives, eg leads to lower inflation but higher unemployment.</li> <li>• It is difficult to turn back the clock – restricting globalisation would be difficult</li> <li>• Attempt to protect an economy from globalisation may just result in retaliatory measures, thus cancelling out the benefits</li> </ul> <p><b>Note:</b> This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</p> |  |
