Paper 3
Section A
7408/3A
Friday 5 June 2020 Afternoon
At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.
[Turn over]

## 2

Time allowed: The total time for both sections of this paper is 2 hours. You are advised to spend approximately 70 minutes on this section.

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet

## INSTRUCTIONS

- Use black ink or black ball-point pen.
- Answer ALL questions.
- You must answer the questions in the spaces provided. Do not write on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

## INFORMATION

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 45.
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

## DO NOT TURN OVER UNTIL TOLD TO <br> DO SO

## SECTION A

Answer ALL questions in this section.

| 0 | 1 |
| :--- | :--- |

A simple pendulum performs oscillations of period $T$ in a vertical plane.

FIGURE 1, on page 6, shows views of the pendulum at the equilibrium position and at the instant of release. FIGURE 1 also shows a rectangular card marked with a vertical line.
[Turn over]

## FIGURE 1

card marked with a vertical line

\section*{| 0 | 1 | 1 |
| :--- | :--- | :--- |}

The card can be used as a fiducial mark to reduce uncertainty in the measurement of $T$.

Annotate FIGURE 1 to show a suitable position for the fiducial mark. Explain why you chose this position. [2 marks]
[Turn over]

\section*{| 0 | 1 | 2 |
| :--- | :--- | :--- |}

The period of the pendulum is constant for small-amplitude oscillations.

FIGURE 2 shows an arrangement used to determine the maximum amplitude that can be considered to be small, by investigating how $T$ varies with amplitude.

## FIGURE 2

# Describe a suitable procedure to determine $A_{\mathbf{R}}$, the amplitude of the pendulum as it is released. 

You may add detail to FIGURE 2, on the opposite page, to illustrate your answer. [2 marks]

## [Turn over]

FIGURE 3, on the opposite page, shows some of the results of the experiment.

Estimate, using FIGURE 3, the expected percentage increase in $T$ when $A_{\mathbf{R}}$ increases from 0.35 m to 0.70 m .

Show your working. [3 marks]
percentage increase $=$
$\%$

## FIGURE 3

[Turn over]

## 12

## In another experiment the pendulum is released from a fixed amplitude.

The amplitudes $A_{\boldsymbol{n}}$ of successive oscillations are recorded, where $n=1,2,3,4,5 \ldots$.

TABLE 1 shows six sets of readings for the amplitude $\boldsymbol{A}_{5}$.

TABLE 1

| $A_{5} / \mathrm{m}$ | 0.217 | 0.247 | 0.225 | 0.223 | 0.218 | 0.224 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Determine the result that should be recorded for $\boldsymbol{A}_{5}$.

Go on to calculate the percentage uncertainty in this result. [3 marks]
$A_{5}=$ m percentage uncertainty =
[Turn over]

\section*{| 0 | 1 |
| :--- | :--- | :--- |}

TABLE 2 shows results for $\boldsymbol{A}_{\boldsymbol{n}}$ and the corresponding value of $\ln \left(\boldsymbol{A}_{\boldsymbol{n}} / \mathbf{m}\right)$ for certain values of $\boldsymbol{n}$.

TABLE 2

| $n$ | $A_{n} / \mathrm{m}$ | $\ln \left(A_{\boldsymbol{n}} / \mathrm{m}\right)$ |
| :--- | :--- | :--- |
| 2 | 0.238 | -1.435 |
| 4 | 0.225 |  |
| 7 | 0.212 | -1.551 |
| 10 | 0.194 | -1.640 |
| 13 | 0.183 | -1.698 |

Complete TABLE 2. [1 mark]

| 0 | 1.6 |
| :--- | :--- |

Plot on FIGURE 4, on the opposite page, a graph of $\ln \left(A_{n} / \mathrm{m}\right)$ against $\boldsymbol{n}$. [2 marks]

15

## FIGURE 4

[Turn over]

\section*{| 0 | 1 | 7 |
| :--- | :--- | :--- |}

It can be shown that
$A_{n}=A_{0} \delta^{-n}$
where
$A_{0}$ is the amplitude of release of the pendulum
$\delta$ is a constant called the damping factor.

Explain how to find $\boldsymbol{\delta}$ from your graph. You are NOT required to determine $\delta$. [2 marks]

24
The microscope is refocused on the upper surface and the
new vernier reading $R$ is recorded. The vertical deflection $s$
of the beam is equal to $\left(R-R_{0}\right)$.
The total mass $m$ suspended from the beam is increased in
steps of 0.050 kg . A value of $s$ is recorded for each $m$ up to a
value of $m=0.450 \mathrm{~kg}$.
Further values of $s$ are then recorded as $m$ is decreased in
0.050 kg steps until $m$ is zero.
Student A performs the experiment and observes that value
of $s$ during unloading are SOMETIMES different from the
corresponding values for loading.

25
State the type of error that causes the differences student A
observes. [1 mark]

shows a different
out to confirm the results for $\varepsilon$ and $r$.
FIGURE 11, on the
experiment carried
$45$

Initially the power supply is connected in series with an
ammeter and a $22 \Omega$ resistor. The current $I$ in the circuit
is measured.
The number $n$ of $22 \Omega$ resistors in the circuit is increased as
shown in FIGURE 11 . The current $I$ is measured after each
resistor is added.

> It can be shown that $\frac{22}{n}=\frac{\varepsilon}{I}-r$ FIGURE 12 , on the opposite page, shows a graph of the experimental data.
