Paper 1 Inorganic and Physical Chemistry 7405/1

Time allowed: 2 hours
At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.
[Turn over]

## 2

For this paper you must have:

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

## INSTRUCTIONS

- Use black ink or black ball-point pen.
- Answer ALL questions.
- You must answer the questions in the spaces provided. Do NOT write on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

## INFORMATION

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 105 .

## DO NOT TURN OVER UNTIL TOLD TO DO SO

## 4

This question is about the development of lithium cells.

The value of $E^{\ominus}$ for lithium suggests that a lithium cell could have a large EMF.

TABLE 9 shows some electrode potential data.

TABLE 9

|  | $E^{e} / \mathrm{V}$ |
| :--- | :--- |
| $\mathrm{Li}^{+}(\mathrm{aq})+\mathrm{e}^{-} \longrightarrow \mathrm{Li}(\mathrm{s})$ | -3.04 |
| $2 \mathrm{H}_{2} \mathrm{O}(\mathrm{I})+2 \mathrm{e}^{-} \longrightarrow$ |  |
| $\mathrm{H}_{2}(\mathrm{~g})+2 \mathrm{OH}^{-}(\mathrm{aq})$ |  |$)$

73

## 0.9 .1

Use data in TABLE 9 to explain why an aqueous electrolyte is NOT used for a lithium cell. [2 marks]
[Turn over]

## 0 . 9 . 2

In the 1970s lithium-iodine cells became a common power source for heart pacemakers. Lithium iodide is the final product of the cell reaction.

Use the data in TABLE 9, on page 72, to calculate the cell EMF of a standard lithium-iodine cell. [1 mark]

\section*{| 0 | 9 |
| :--- | :--- |}

An EMF value for a commercial lithium-iodine cell is 2.80 V

Suggest why this value is different from the value calculated in Question 09.2. [1 mark]

\section*{| 0 | 9. |
| :--- | :--- |}

In some lithium cells, lithium perchlorate $\left(\mathrm{LiClO}_{4}\right)$ is used as the electrolyte.

Deduce the oxidation state of chlorine in $\mathrm{LiClO}_{4}$ [1 mark]

In other lithium cells, lithium cobalt oxide electrodes AND lithium electrodes are used.

\section*{| 0 | 9 | 5 |
| :--- | :--- | :--- |}

Give an equation for the reaction that occurs at the positive lithium cobalt oxide electrode. [1 mark]

\section*{| 0 | 9 |
| :--- | :--- |}

Give an equation for the reaction that occurs at the negative lithium electrode. [1 mark]
