# GCSE ECONOMICS

Paper 1 How markets work

Time allowed: 1 hour 45 minutes

## **Materials**

You will need no other materials.

You may use a calculator.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

#### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.
- Questions should be answered in continuous prose. You will be assessed on your ability to:
  - use good English
  - organise information clearly
  - use specialist vocabulary where appropriate.

### Figure 4

The Competition and Markets Authority (CMA) is a government department that promotes competition in the UK. Its aim is to encourage fair competition between firms, so that markets work well for consumers. It investigates markets if there is a danger that a lack of fair competition exists.

The CMA recently investigated:

- 1. Whether dairy farmers were being exploited by large supermarkets, and whether these supermarkets also worked together to increase prices of milk and cheese for consumers.
- 2. The major petrol companies and 'big four' supermarkets for not reducing petrol prices at their petrol stations after crude oil prices fell.
- 3. A lack of competition among high street banks, leading to poor customer service and excessive fees, eg for arranging an overdraft.

Firms in non-competitive markets argue that they benefit consumers and the UK economy as a whole. They say that consumers benefit from better quality and lower prices and that the UK economy may be more internationally competitive.

2 1	Using <b>Figure 4</b> , assess the costs <b>and</b> benefits to consumers of having a ndominated by a small number of firms.	narket

### **Section B**

Answer all questions in the spaces provided.

## Item A – Flooding in the UK, 2019

In 2019, heavy rainfall led to many areas of the UK being affected by severe flooding. This led to significant damage to houses, businesses and vehicles. There were wider effects upon the UK economy and its population of 67 million people as many were unable to travel to work, meaning production fell. People were also unable to visit shops and restaurants meaning that these businesses lost revenue.

The UK Government proposed to spend large sums of money to reduce the problems of flooding in the future, as outlined in **Table 5**.

**Table 5** – Methods to prevent flooding

Item	Cost (£m)
Raising river banks	32.8
Flood barriers	120.3
Dredging river beds	17.0
Flood warning systems	28.7
Restoring rivers to natural courses	15.5
Introducing water storage areas	12.6
Modifying homes and buildings	212.8
Tree planting	19.1

#### Item B - Global warming

Global warming refers to the increasing temperature of the Earth's atmosphere and oceans. Many scientists are certain that the main cause of global warming is increasing levels of greenhouse gases caused by the burning of fossil fuels and by deforestation. Consequences of global warming include more extreme weather, loss of farmland and increased flooding.

Economists point out the unfairness of global warming. They state that it is mainly caused by activities in more economically developed countries, such as the UK. However, the consequences are often faced by citizens of less economically developed countries, who are less financially able to deal with them.

Many economists argue that global warming is an inevitable consequence of economic growth, and that it will reduce the ability of future generations to enjoy an improved standard of living. They say that there is often a conflict between economic growth and sustainability.

The governments of more economically developed economies, such as the UK, argue that less economically developed economies, such as China and India, should do more to solve global warming, for example by reducing their emissions of greenhouse gases. However, this may lead to reduced growth in these countries.

Countries such as China argue that many of the problems of global warming have been created by more economically developed economies which grew rapidly in the past. They argue that these countries should do more to help less economically developed economies. This would include providing more money to help them cope with the effects of extreme weather, such as flooding.

Potential solutions to the problem of global warming include reduced use of fossil fuels such as coal and oil, along with greater use of renewable forms of energy such as solar and wind energy.

**Table 6** – Emissions and other data for UK and China, 2017

Country	Share of global emissions	Share of global Gross Domestic Product (GDP)	Share of global population
UK	1.0%	3.1%	0.9%
China	29.3%	16.2%	18.5%
