I declare this is my own work.

# **A-level FURTHER MATHEMATICS**

**Paper 3 Mechanics**

**7367/3M**

**Time allowed: 2 hours**

**At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.**

**[Turn over]**

- You must have the AQA Formulae and statistical tables booklet for A-level Mathematics and A-level Further Mathematics.
- You should have a scientific calculator that meets the requirements of the specification.
- You must ensure you have the other optional Question Paper/Answer Book for which you are entered (EITHER Discrete OR Statistics). You will have 2 hours to complete BOTH papers.

## INSTRUCTIONS

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Answer ALL questions.
- You must answer each question in the space provided for that question. If you require extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do NOT write on blank pages.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

**INFORMATION**

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 50.

**ADVICE**

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

**DO NOT TURN OVER UNTIL TOLD TO DO SO**

## SECTION A

Answer ALL questions in the spaces provided.

- 1 The graph shows how a force,  $F$  newtons, varies during a 5 second period of time.

**5**

**Calculate the magnitude of the impulse of the force.**

**Circle your answer. [1 mark]**

**17.5 N s**

**25 N s**

**35 N s**

**70 N s**

**[Turn over]**

2 A car of mass 1200 kg is travelling at a constant speed of  $18 \text{ m s}^{-1}$  on a straight horizontal road.

The car experiences a total resistive force of 240 newtons.

Calculate the power of the car's engine.

Circle your answer. [1 mark]

900 W

4320 W

16 000 W

21 600 W

**3** Three particles are attached to a light rod,  $AB$ , of length 40 cm

The particles are attached at  $A$ ,  $B$  and the midpoint of the rod.

The particle at  $A$  has mass 5 kg

The particle at  $B$  has mass 1 kg

The particle at the midpoint has mass 4 kg

Find the distance of the centre of mass of this system from the midpoint of the rod.

Circle your answer. [1 mark]

4 cm

8 cm

12 cm

28 cm

[Turn over]

4 (a) State the dimensions of force. [1 mark]

---

---

---

---

---

4 (b) The velocity of an object in a circular orbit can be calculated using the formula

$$v = G^a m^b r^c$$

where:

$G$  = Universal constant of gravitation  
in  $\text{N m}^2 \text{kg}^{-2}$

$m$  = Mass of the Earth in kg

$r$  = Radius of the orbit in metres

Use dimensional analysis to find the values of  $a$ ,  
 $b$  and  $c$  [4 marks]

**[Turn over]**

- 5 A train of mass 10 000 kg is travelling at  $0.3 \text{ m s}^{-1}$  when it collides with a buffer. The buffer brings the train to rest.

As the buffer brings the train to rest it compresses by 0.2 metres.

When the buffer is compressed by a distance of  $x$  metres it exerts a force of magnitude  $F$  newtons, where

$$F = Ax + 9000x^2$$

where  $A$  is a constant.

- 5 (a) Find, in terms of  $A$ , the work done in compressing the buffer by 0.2 metres. [2 marks]

---

---

---

---

---

---

---

---

---

---

5 (b) Find the value of  $A$  [2 marks]

---

---

---

---

---

---

---

---

---

---

---

[Turn over]

- 6 A particle, of mass 5 kg, moves on a circular path so that at time  $t$  seconds it has position vector  $\mathbf{r}$  metres, where

$$\mathbf{r} = (2 \sin 3t)\mathbf{i} + (2 \cos 3t)\mathbf{j}$$

- 6 (a) Prove that the velocity of the particle is perpendicular to its position vector. [4 marks]

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**BLANK PAGE**

**[Turn over]**

7 Two snooker balls, one white and one red, have equal mass.

The balls are on a horizontal table *ABCD*

The white ball is struck so that it moves at a speed of  $2 \text{ m s}^{-1}$  parallel to *AB*

The white ball hits a stationary red ball.

After the collision, the white ball moves at a speed of  $0.8 \text{ m s}^{-1}$  and at an angle of  $30^\circ$  to *AB*

After the collision, the red ball moves at a speed  $v \text{ m s}^{-1}$  and at an angle  $\theta$  to *CD*

When the collision takes place, the white ball is the same distance from *AB* as the distance the red ball is from *CD*

The diagram below shows the table and the velocities of the balls after the collision.

Not to scale

After the collision, the white ball hits *AB* and the red ball hits *CD*

Model the balls as particles that do not experience any air resistance.

- 7 (a) Explain why the two balls hit the sides of the table at the same time. [2 marks]

---

---

---

---

[Turn over]

---

---

---

---

---

7 (b) Show that  $\theta = 17.0^\circ$  correct to one decimal place. [4 marks]

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

[Turn over]

7 (c) Find  $v$  [2 marks]

---

---

---

---

---

---

---

7 (d) Determine which ball travels the greater distance after the collision and before hitting the side of the table.

Fully justify your answer. [2 marks]

---

---

---

---

---

---

---

7 (e) State ONE possible refinement to the model that you have used. [1 mark]

---

---

---

[Turn over]

**8 IN THIS QUESTION USE  $g$  AS  $9.8 \text{ m s}^{-2}$**

**A rope is used to pull a crate, of mass 60 kg, along a rough horizontal surface.**

**The coefficient of friction between the crate and the surface is 0.4**

**The crate is at rest when the rope starts to pull on it.**

**The tension in the rope is 240 N and the rope makes an angle of  $30^\circ$  to the horizontal.**

**When the crate has moved 5 metres, the rope becomes detached from the crate.**

**8 (a) Use an energy method to find the maximum speed of the crate. [4 marks]**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

9

Two blocks have square cross sections.

One block has mass 9 kg and its cross section has sides of length 20 cm

The other block has mass 1 kg and its cross section has sides of length 4 cm

The blocks are fixed together to form the composite body shown in FIGURE 1.

FIGURE 1

- 9 (a) Find the distance of the centre of mass of the composite body from  $AF$  [2 marks]

---

---

---

---

---

---

---

---

---

---

---

[Turn over]

9 (b) A uniform rod has mass 12 kg and length 1 metre.

One end of the rod rests against a smooth vertical wall.

The other end of the rod rests on the composite body at point  $B$

The composite body is on a horizontal surface.

The coefficient of friction between the composite body and the horizontal surface is 0.3

The angle between the rod and  $AB$  is  $60^\circ$

A particle of mass  $m$  kg is fixed to the rod at a distance of 75 cm from  $B$

The rod, particle and composite body are shown in FIGURE 2 opposite.

FIGURE 2

[Turn over]

- 9 (b) (i) Write down the magnitude of the vertical reaction force acting on the rod at  $B$  in terms of  $m$  and  $g$  [1 mark]

---

---

---

---

---

9 (b) (ii) Show that the magnitude of the horizontal reaction force acting on the rod at  $B$  is

$$\frac{g(6 + 0.75m)}{\sqrt{3}}$$

[3 marks]

---

---

---
