## GCSE <br> COMBINED SCIENCE: SYNERGY

## Foundation Tier Paper 3 Physical Sciences

Time allowed: 1 hour 45 minutes

## Materials

For this paper you must have:

- a ruler
- a protractor
- a scientific calculator
- the periodic table (enclosed)
- the Physics Equations Sheet (enclosed).

## Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

The word equation for the reaction is:
calcium carbonate + hydrochloric acid $\rightarrow$ calcium chloride + water + carbon dioxide

A student investigated the effect of changing the surface area of the calcium carbonate on the rate of this reaction.

The student changed the surface area of the calcium carbonate by using different-sized lumps.

Figure 6 shows the apparatus.
Figure 6

The rate of reaction is determined by measuring the decrease in mass of the conical flask and contents at regular time intervals.

This is the method used.

1. Place a conical flask on a balance.
2. Add $50 \mathrm{~cm}^{3}$ of hydrochloric acid to the conical flask.
3. Add 2 g of small lumps of calcium carbonate to the hydrochloric acid.
4. Put cotton wool in the top of the conical flask.
5. Record the mass every 60 seconds until the mass remains constant.
6. Repeat steps 1 to 5 with 2 g of large lumps of calcium carbonate.
